

Beyond Graphene: Two-Dimensional Crystals

Monday, 23 July 2012 09:45 (25 minutes)

Antonio Castro Neto
National University of Singapore

Graphene is possibly one of the largest and fastest growing fields in condensed matter research. However, graphene is only one example in a large class of two-dimensional crystals with unusual properties. In this talk I will briefly review the properties of graphene and look at the exciting possibilities that lie ahead.
