

Single-Top Production in the Standard Model and Beyond

Tuesday, 29 May 2018 17:50 (20 minutes)

I present high-order calculations for single-top production in the Standard Model and in models with anomalous top-quark couplings. Theoretical results are presented for total cross sections and top-quark transverse momentum and rapidity distributions for the t and s single-top channels as well as for the associated production of a top quark with a W -boson in the Standard Model. Corrections from soft-gluon emission through NNNLO are included. I also show results for the associated production of a top quark with a Z boson in processes involving anomalous top-quark couplings.
