

## Frontiers in Electroweak Symmetry Breaking

*Tuesday, 29 May 2018 10:10 (35 minutes)*

The Higgs discovery changed our understanding of electroweak symmetry breaking, and the current theoretical focus is on illuminating the properties of the Higgs boson. I will discuss the Standard Model Higgs sector as the low energy limit of unknown high scale physics and present the status of theoretical calculations in the electroweak symmetry breaking sector and prospects for future discoveries.
