

Measurement of Cross Sections and Properties of the Higgs Boson in Decays to Bosons Using the ATLAS Detector

Tuesday, 29 May 2018 16:55 (25 minutes)

Measurements of Higgs boson properties and cross sections measured in Higgs boson decays to two photons, two Z bosons, and two W bosons based on pp collision data collected at 13 TeV are presented. In addition, results from the combination of different decay channels are shown.
