# Cross-Section

- Intra-beam distance of 400 mm
- Yoke diameter of 1.2 m
- Shell (stainless) thickness is 30 mm

- 4 common-coils  
1 x HTS + 3 x Nb<sub>3</sub>Sn
- 4 pole-coils (HTS)
- 50 mm clear bore
- Target Field is 20 T

# Mech Analysis: some assumptions

- Shell, pads/collars, common-coils formers and pole coils forms made of 314 L
- Turns belonging to the same block are bonded together
- Pads/collars pieces are bonded
- Layers can slide and detach from each other and from the surrounding pads/collars
- Pole formers are attached to the pad/collar
- Pre-load is applied with three keys (contacts)
- Keys are 40 mm long
- Many DoFs to be optimized

key	Interference in mm
1	0.1
2	0.8
3	0.8

# Mech Analysis Coils

- Model 2 higher stress due to the interlayer 1-2 overbend

# To be done

- Add strands on lay 1 to have 15% of margin
- Thicker intralayer 1-2
- Thicker rib between blocks on the bottom
- Match rib to pole coils former
- Re-optimize for field quality
- Check protection
