# Novel Approach for Improving Nuclear Data for Antineutrino Spectra Predictions

**FOA-LAB17-1763**

U.S. DEPARTMENT OF ENERGY | Office of Science

National Nuclear Security Administration

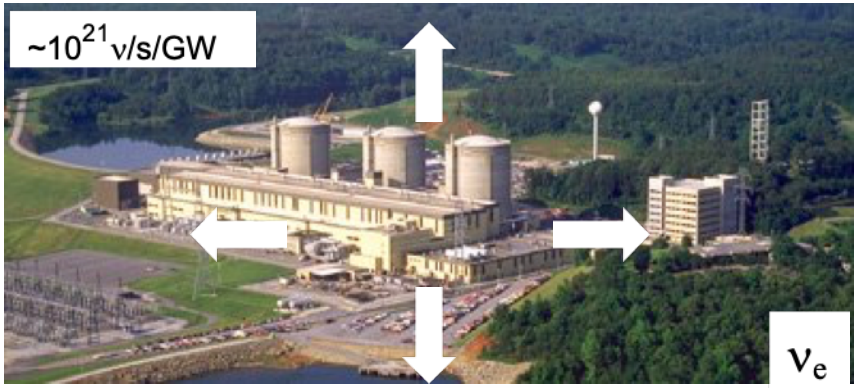
Nuclear Physics

NA-22

**WANDA2021 February 3, 2021**

U.S. DEPARTMENT OF ENERGY

# Introduction

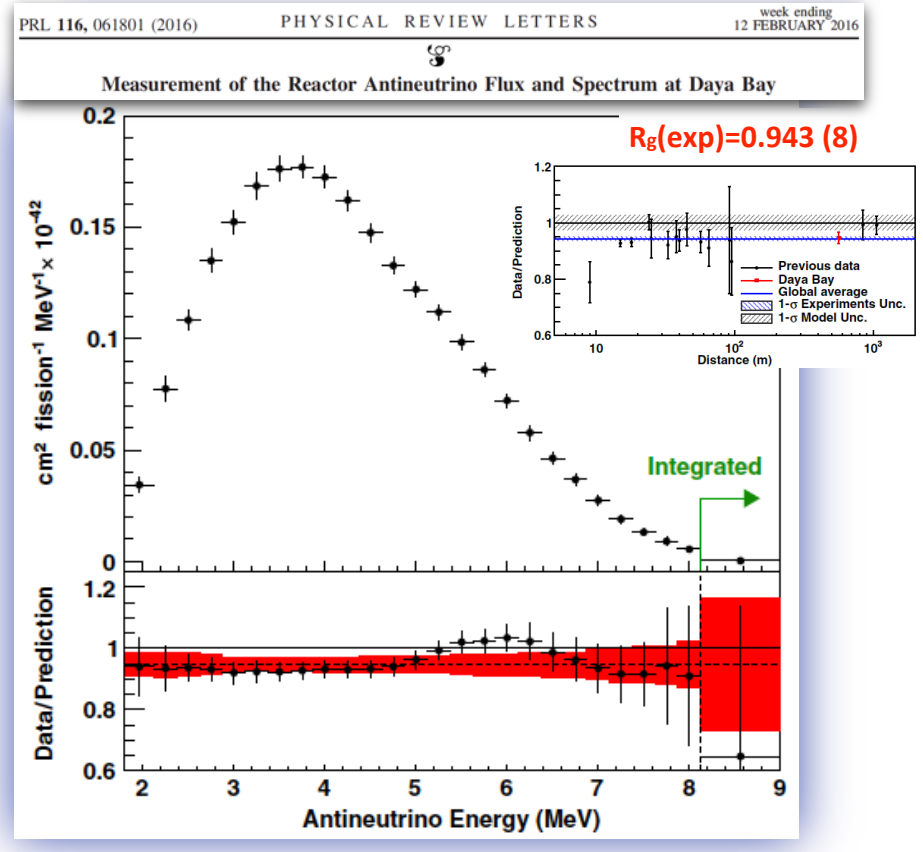


**compelling physics**

- physics beyond the Standard Model
- astrophysics - supernovae core collapse & big bang nucleosynthesis
- neutrinoless double beta decay
- reactor anomaly & ν oscillations

**applications**

- detection of fissile materials from peaceful & military program
- remote safeguards and monitoring of operation status and power levels of reactors
- remote fission inventories in operating reactors



The New York Times

*How to Spot a Nuclear Bomb Program? Look for Ghostly Particles*

By Kenneth Chang March 27, 2018

# Nuclear Data Needs

International Atomic Energy Agency
Nuclear Data Services
Provided by the Nuclear Data Section

INDC(NDS)-0676
Distr. EN, ND

## INDC International Nuclear Data Committee

~30 priority I and II nuclides

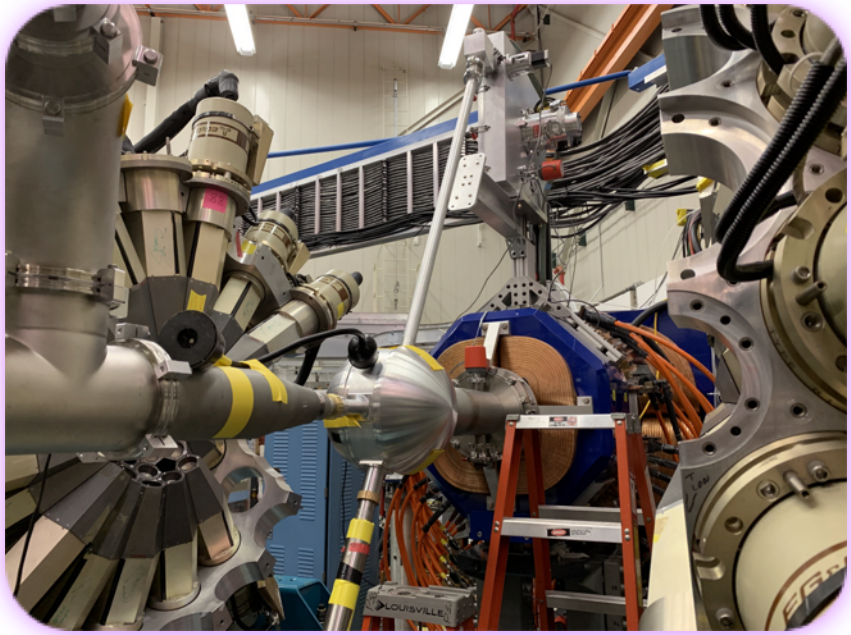
## How to improve the needed ND?

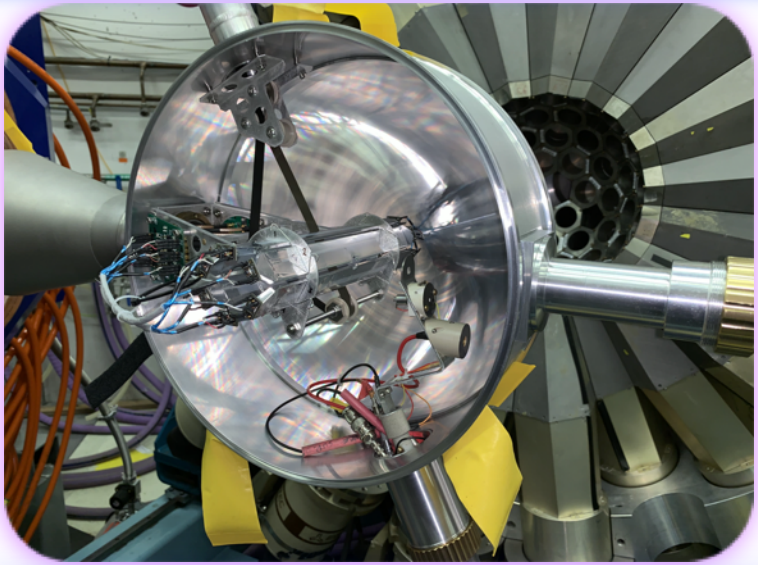
- unique capabilities of ***CARIBU@ANL*** (DOE/SC/NP National User Facility) to produce high-purity beams of essentially all fission products
- state-of-the-art detector equipment - ***Gammasphere***

# Gammasphere decay station

## Advantages

- **discrete & calorimetry** γ-ray spectroscopy techniques within a single device
- **high granularity** & **resolving power** ($\Delta E\gamma$=2 keV, P/T~60% and $\varepsilon_\gamma$~85%) - ability to resolve week γ-ray cascades ($10^{-5}$-$10^{-6}$ %)
- **complete decay schemes** - angular correlations for transition multipolarities & Jπ assignments - end game in nuclear spectroscopy

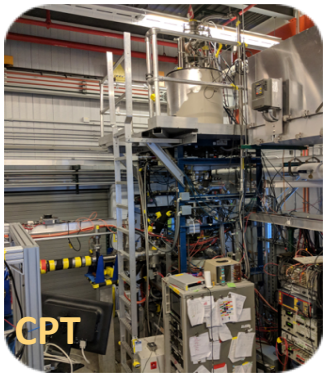


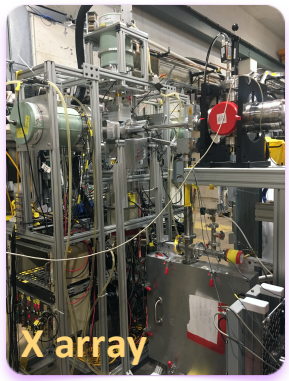


- **HEART** - HExagonal ARray for Triggering
  - ✓ 6 EJ-204 plastic scint. & 12 SiPM
  - ✓ $\varepsilon_\beta$~75% from β-γ singles & coin.
- powerful γ-γ-β-t coincidence device

# Current status

- Completed two experimental campaigns:
  - ✓ **December 2018** – aimed at transitional (weakly-deformed) $^{144}$La, $^{146g,m}$La, $^{144}$Ba, $^{146}$Ba, $^{146}$Ce nuclei
  - ✓ **December 2019** – aimed at well-deformed $^{102g,m}$Nb, $^{104g,m}$Nb, $^{102}$Zr, $^{104}$Zr, $^{102}$Mo, $^{104}$Mo nuclei
- Additional nuclear data were obtained by implementing the Canadian Penning Trap (CPT) & X array (5 Ge CLOVER detectors)



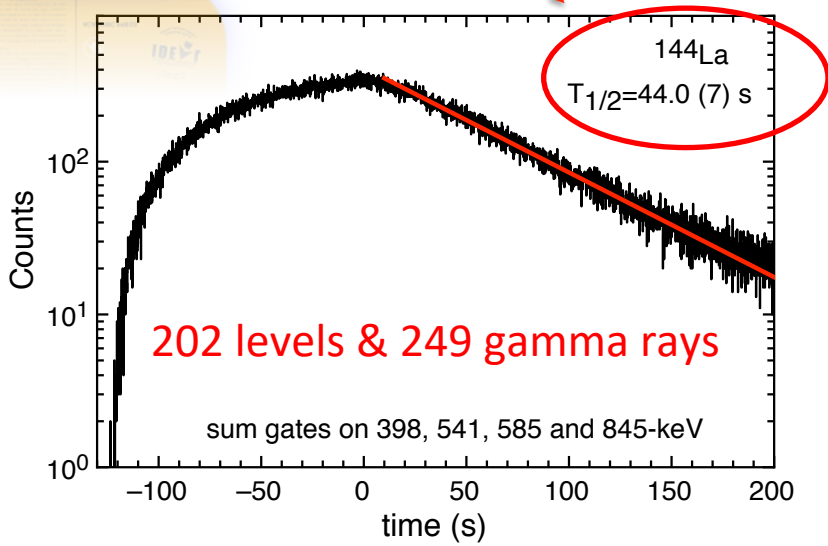


- A new campaign was approved by the ATLAS Program Advisory Committee - delayed to later this year due to COVID-19

$^{144}$La

$(3^-)$ 0.0

**40.8 (4) s**



10% difference - purity of the source in previous experiments

$^{144}$Ba(11.7 s) -> $^{144}$La(44 s)->$^{144}$Ce(285 d)

spin-traps isomers resulting from the residual π–ν interactions

- very complex decay schemes with overlapping decay paths between the ground state and isomer
- unambiguously resolved the isomer from the ground state
- for the first time a comprehensive decay schemes for the ground state and the isomer were established

- data on $^{144}$La are being prepared for publication in **PHYSICAL REVIEW C**

# Conclusions & Outlook

- **Gammasphere** was converted into a powerful spectrometer for beta-decay studies of nuclei in the fission product region - state-of-the-art decay spectroscopy with **CARIBU** beams
  - ✓ ***compelling physics*** - structure of neutron-rich nuclei in the FP region - great discovery potential & detailed spectroscopy studies (resolving isomer decays)
  - ✓ ***valuable data for applications*** - antineutrino spectra, fission product yields (presentations by K. Kolos & G. Savard), decay heat, safeguards and others
- first results on $^{144}$La & $^{146,146m}$La ($^{144,146}$Ba & $^{146}$Ce) & deformed $^{102,102m,104,104m}$Nb ($^{102,104}$Zr & $^{102,104}$Mo) – resolved differences between previous studies & existing ND evaluations
- targeted experiments will continue during FY21-FY22 for other nuclei on the IAEA priority list
