

# Charged Jet Reconstruction with an All-Silicon Tracker

# Jets in e+P PYTHIA Simulation

- PYTHIA 8:

- PYTHIA 8
- $Q_{\min}^2 \geq 16 (\text{GeV}/c^2)^2$
- $\sqrt{s} = 89$
- Electron beam: 20 GeV
- Proton beam: 100 GeV
- $B = 1.4$  and  $3.0 \text{ T} > 4 \text{ GeV}$

- Jets:

- $E_{\text{Reco}}^{\text{Jet}} > 4 \text{ GeV}$
- Anti- $k_T$   $R = 1.0$
- # of Jet Constituents  $\geq 4$
- $\Delta R < 0.1$  between Reco and Truth axis
- $\Delta R$  (jet-electron)  $> 0.5$ 
  - “Electron Veto”

- Tracking

- Truth Seeded Tracking
- 100% *hit* efficiency
- $\eta$ -dependent minimum  $p_T$  threshold for constituents

# Charged Jet Momentum Response

$B = 3.0 \text{ T}$

$B = 1.4 \text{ T}$

**Clear truth-reco correlation, but with significant number of off-diagonal hits**

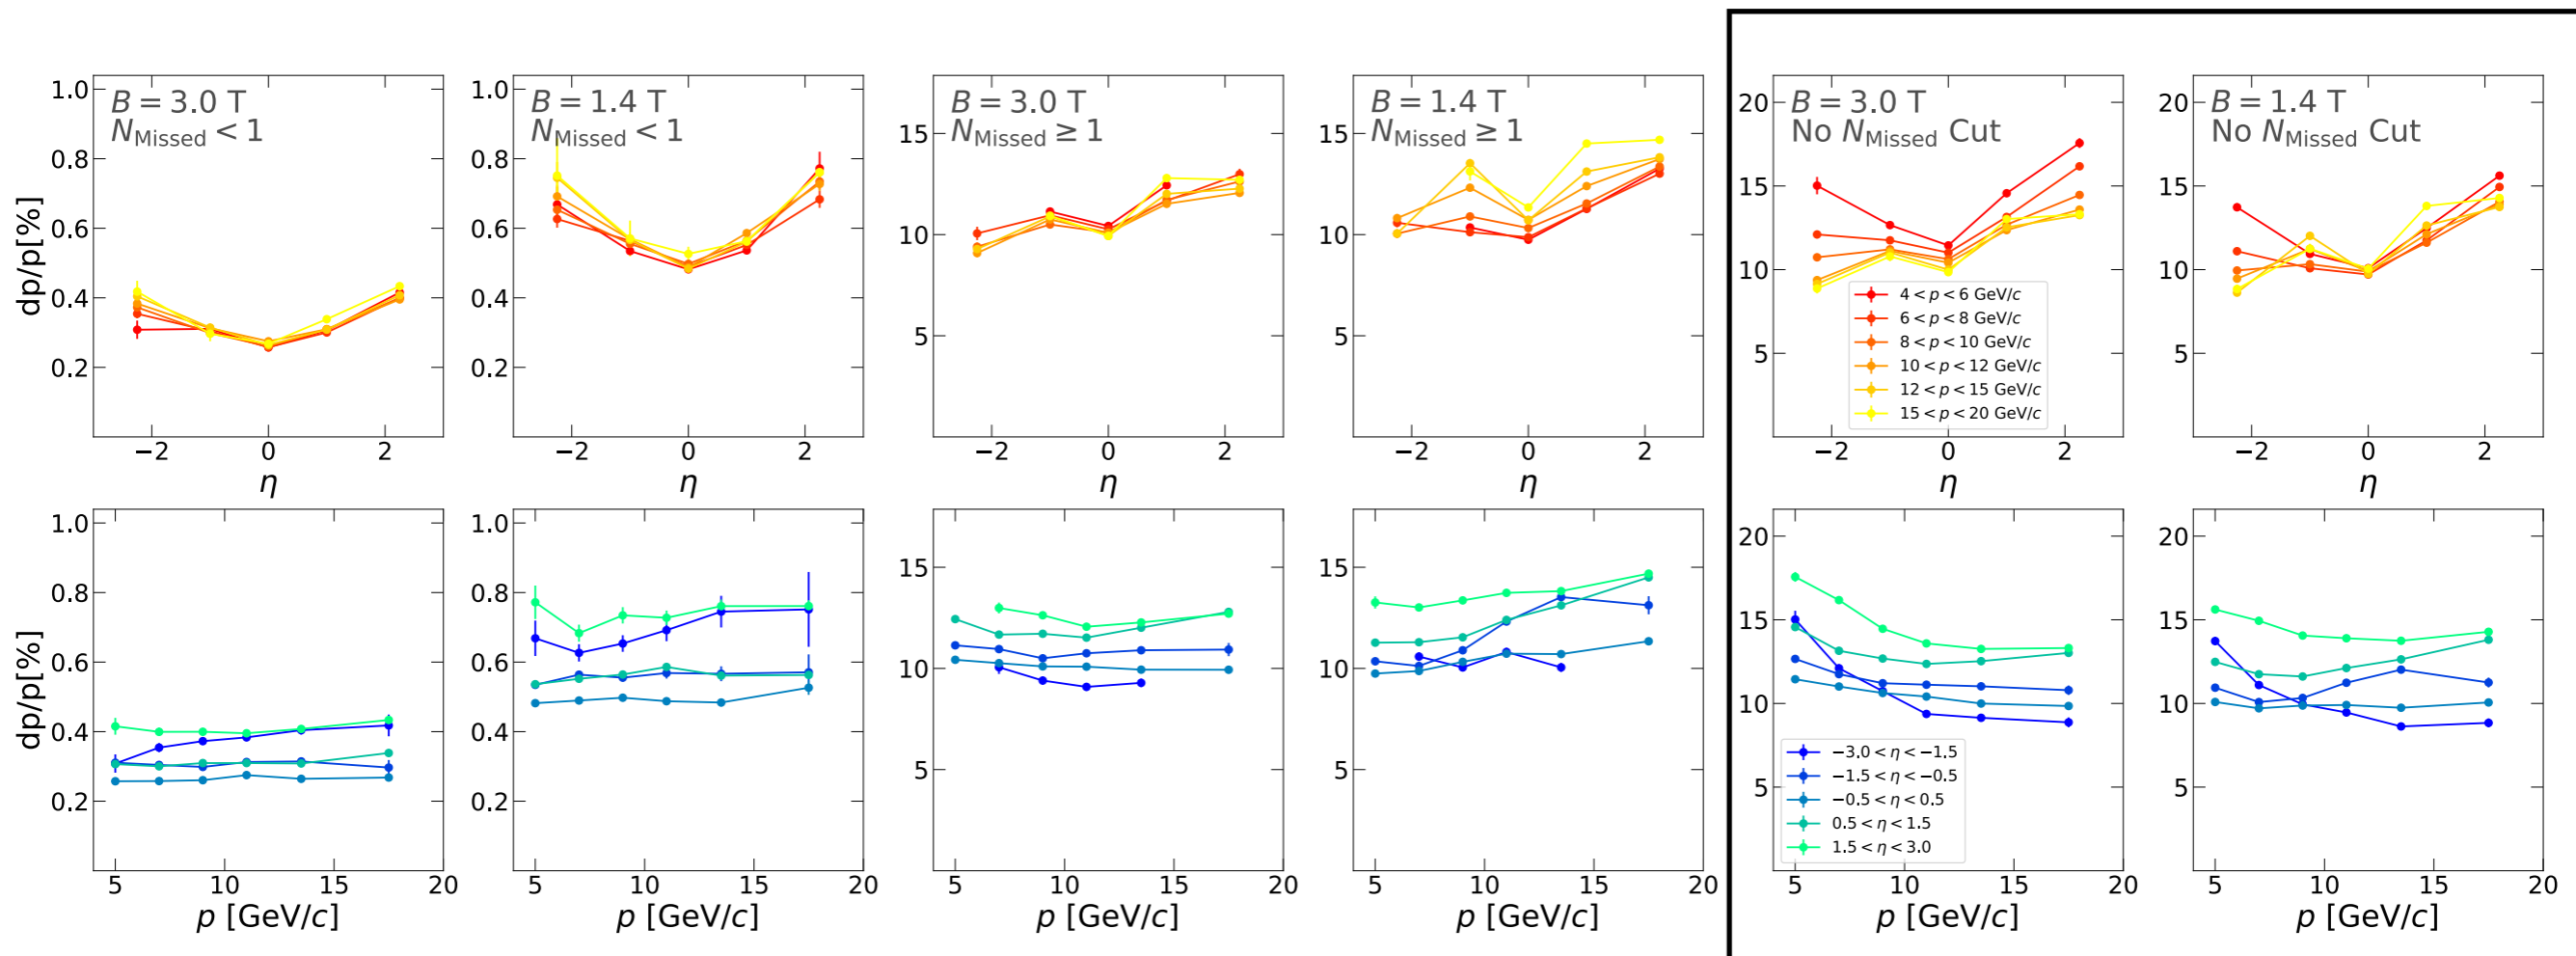

# Two Populations of Jets

Number of Missed Charged Constituents:

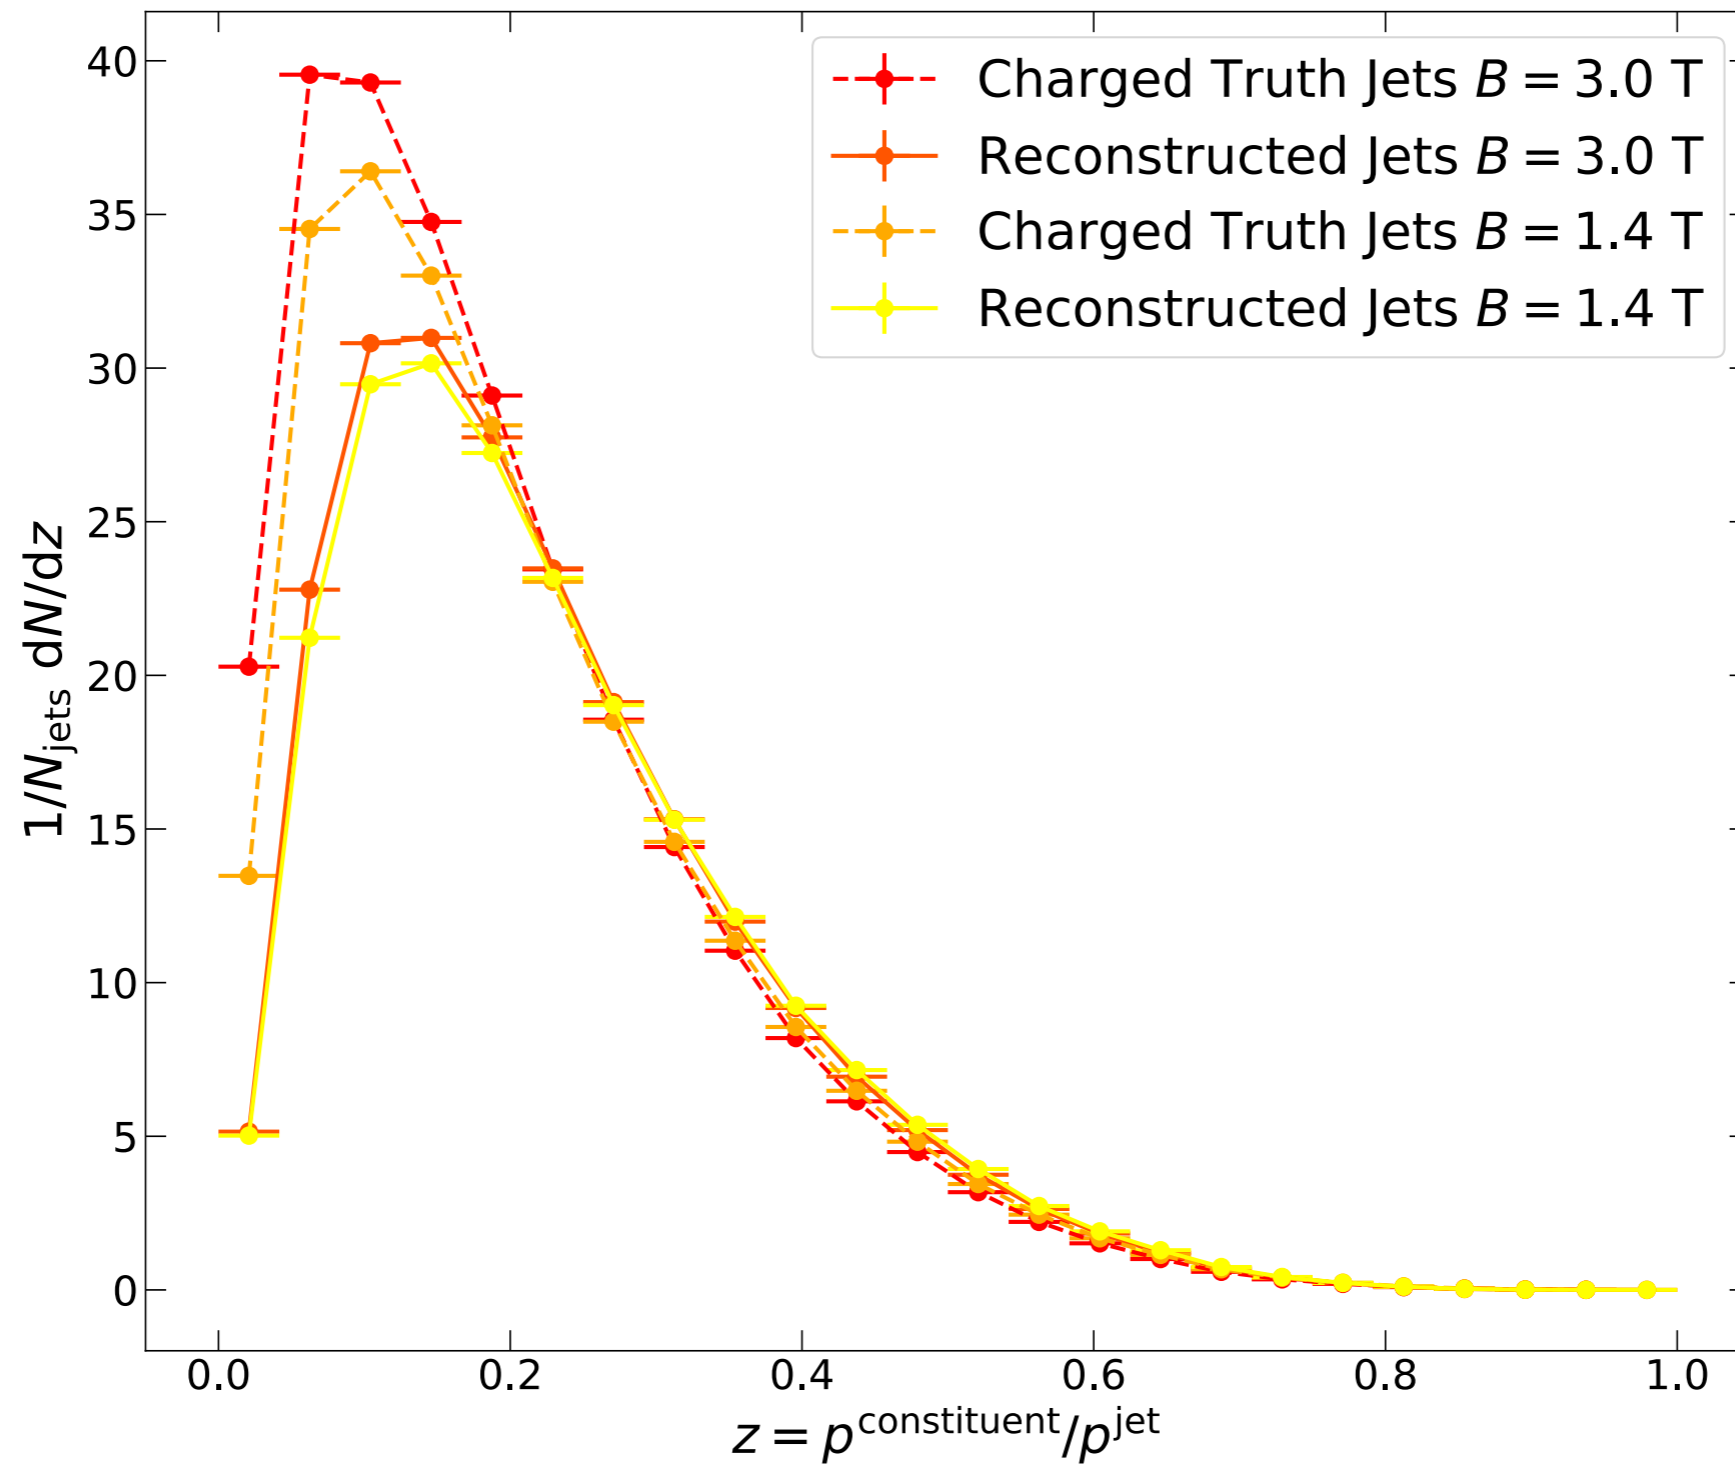

$$N_{\text{missed}} = N_{\text{constituents}}^{\text{truth}} - N_{\text{constituents}}^{\text{reco}} - N_{\text{neutral}}^{\text{truth}}$$

# Momentum Resolution ( $\sigma_p$ or StdDev)

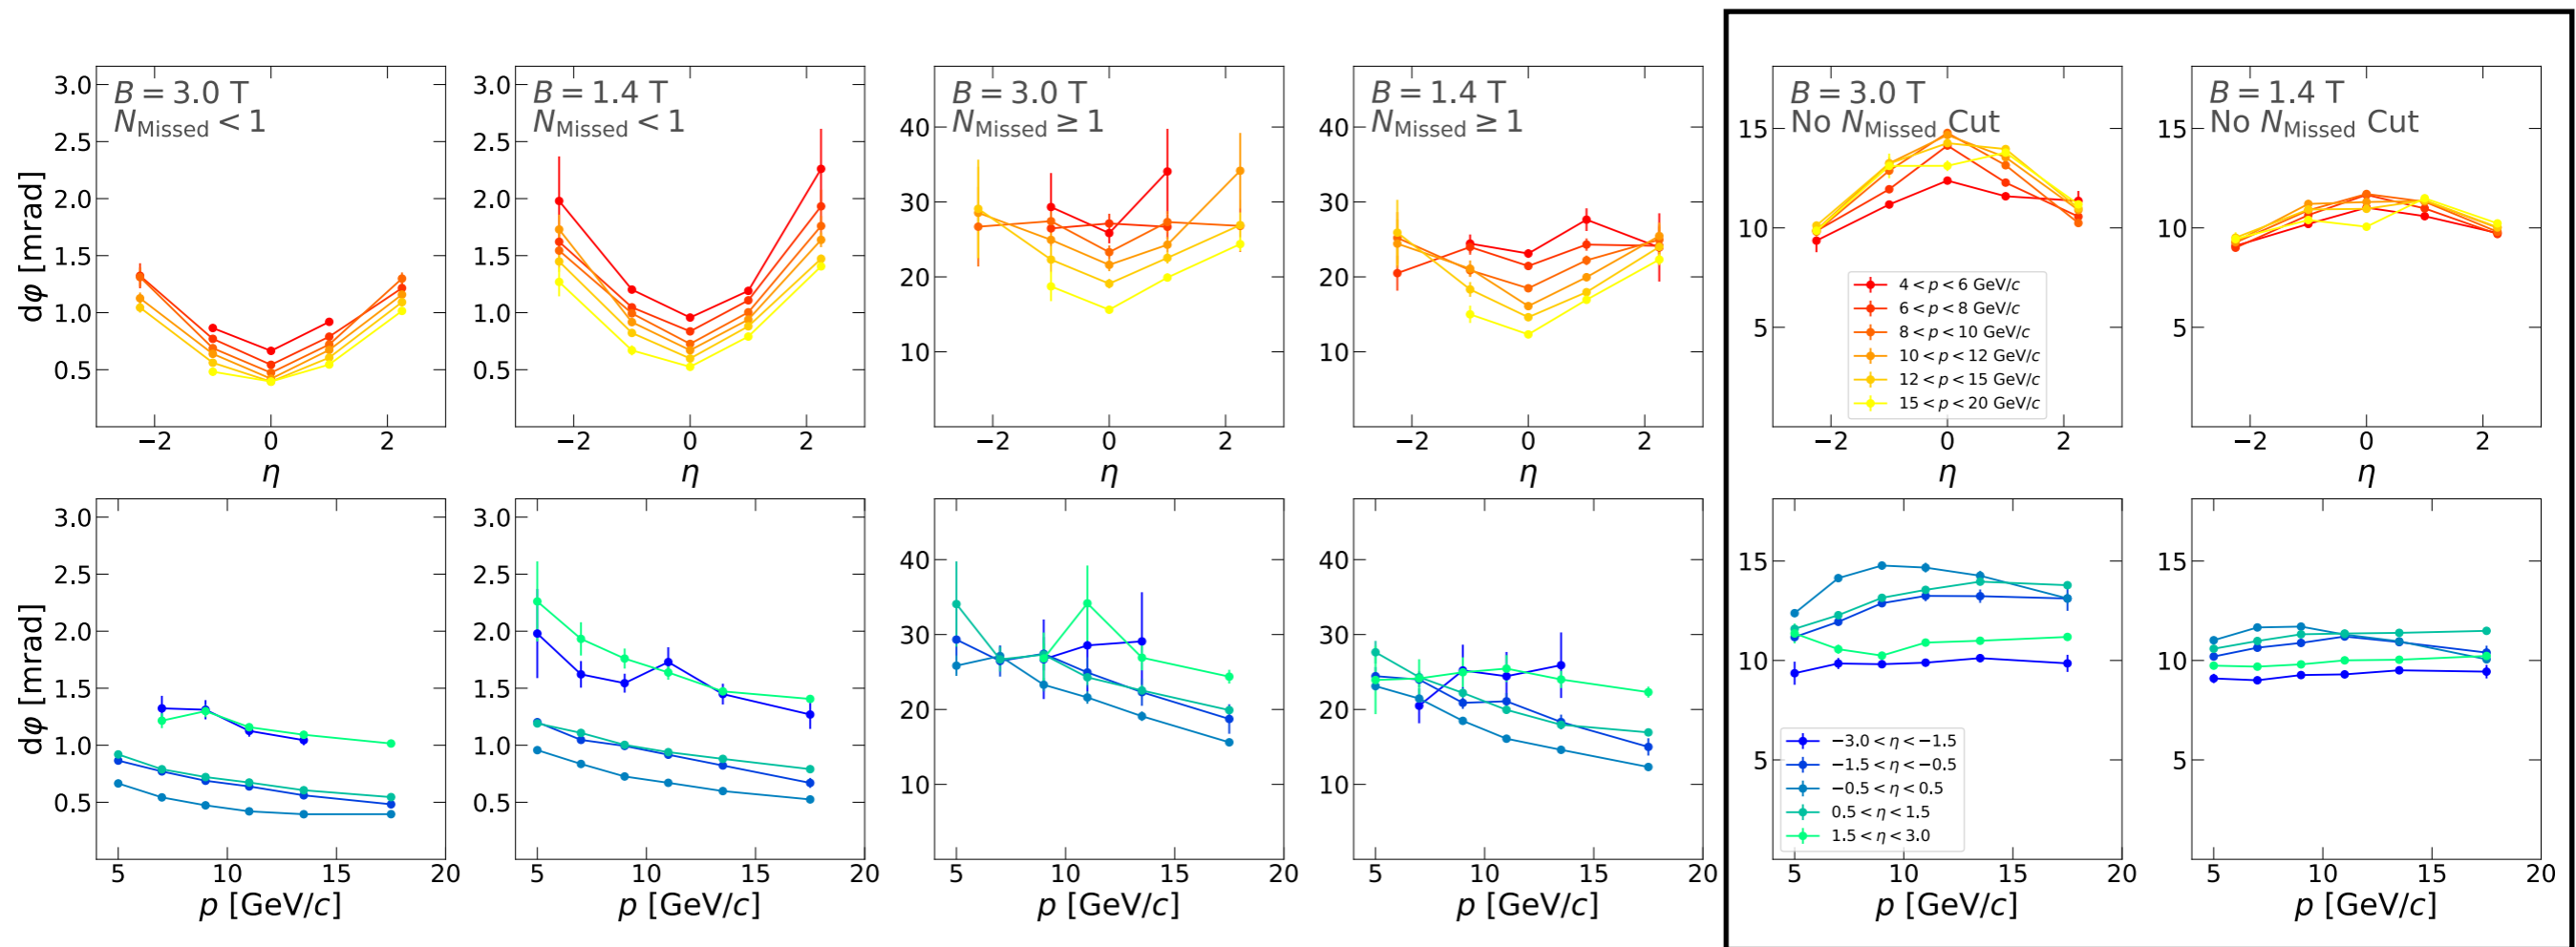

**Jets with no missing constituents have better momentum resolution**  
**Jets at central rapidities generally have better resolution as well**

# Charged Jet Fragmentation Function

**Fragmentation Function in both magnetic fields are similar**

# $\varphi$ Resolutions

**Resolutions show dependance on  $\eta$ , better at central**  
**Jets without any missing constituents have better pointing resolution, as expected**

# Electron-Jet Correlation

Observable difference between B fields at low  $\Delta\varphi$

To be fit with gaussian, extract width

Observable can probe TMD distributions<sup>[1]</sup>

[1] [arXiv:1812.08077](https://arxiv.org/abs/1812.08077)

# Next Steps

- Luminosity X Cross Section for Observables
  - e+P collisions,  $Q^2 \geq 20 \text{ GeV}^2/c^2$
- Smear Electron Truth information and apply E/p cluster selection
  - Current observables do not depend on  $E_{\text{Reco}}$
  - This selection ensures correct number of events for electron-jet correlation plot
- Study Low  $p_T$  Threshold for Jet Constituents

**End.**

# Example of Distribution

$6 < p < 8 \text{ GeV}/c$  ( $\leftarrow$  Momentum Label)

$$N_{\text{Missed}} < 1$$

$$N_{\text{Missed}} \geq 1$$

No  $N_{\text{Missed}}$  Cut

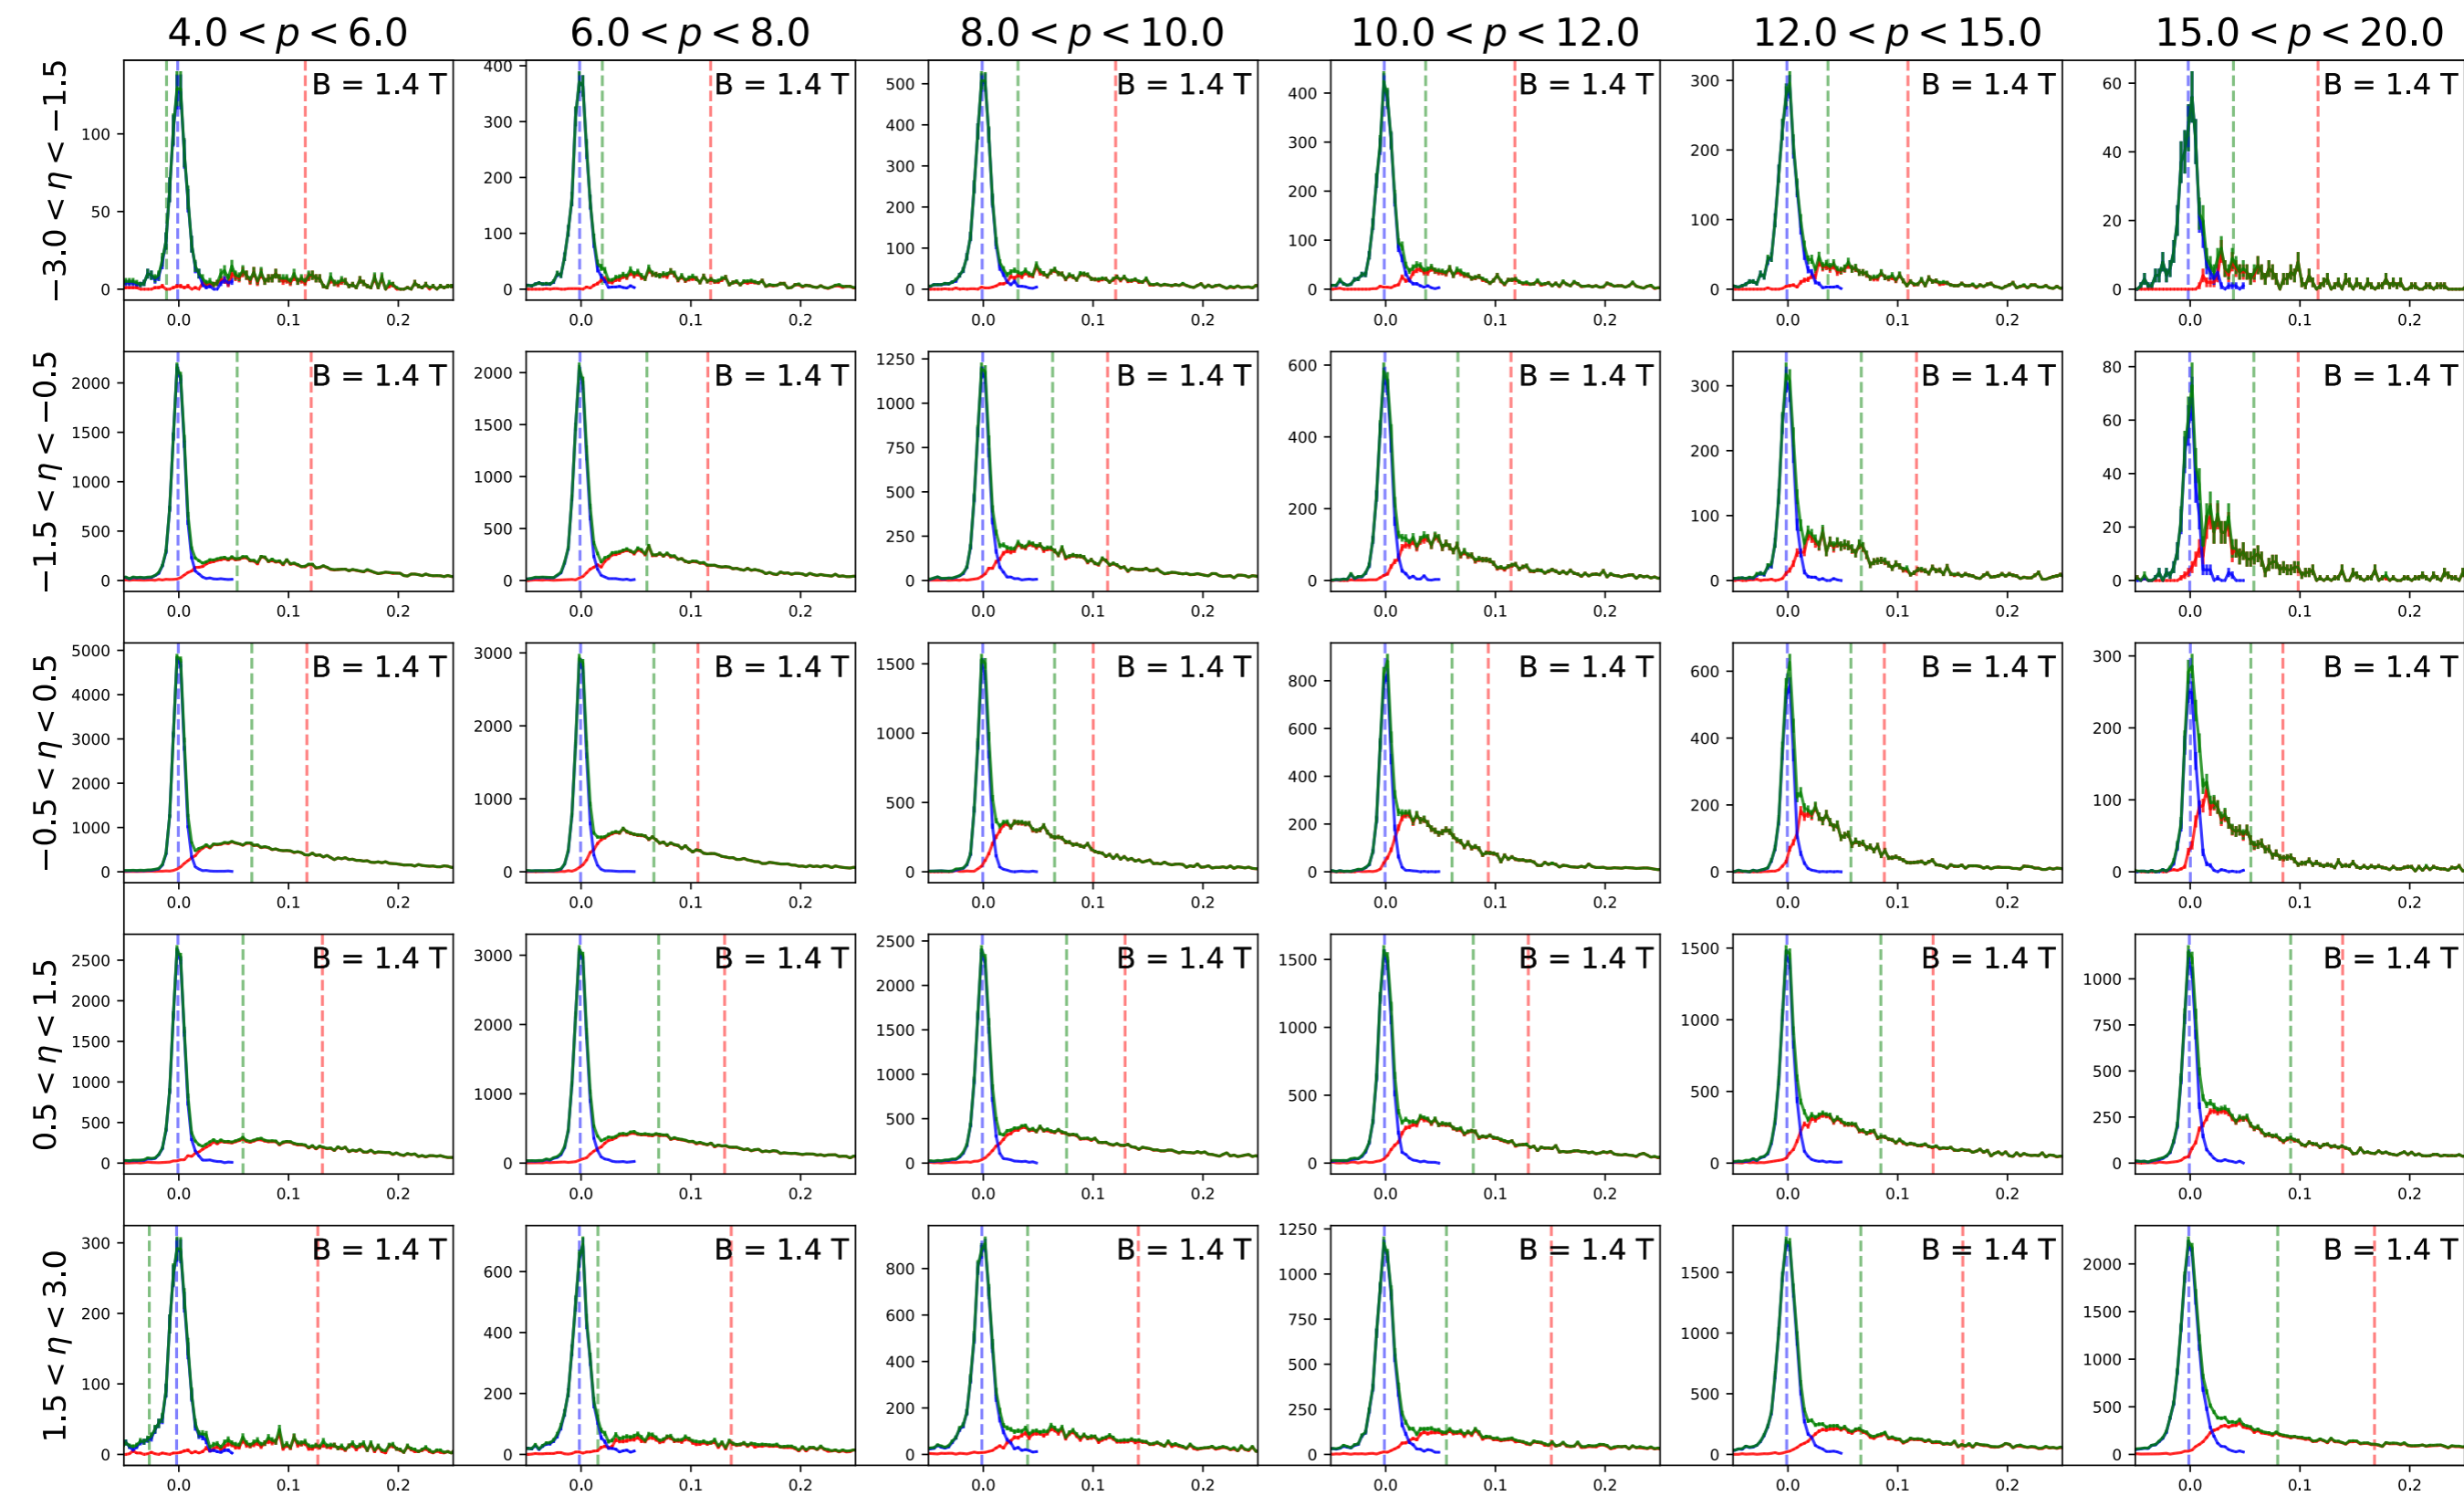

$$\sigma = \sqrt{\frac{\sum (X - \mu)^2}{N}}$$

- **Y-Axis:** Simply the counts (histogram)
- **X-axis:**  $dp/p$  (%), given in title
- **Dashed Lines:** Mean of distribution

$N_{\text{Missed}} < 1$   $N_{\text{Missed}} \geq 1$  No  $N_{\text{Missed}}$  Cut

**B = 1.4 T**

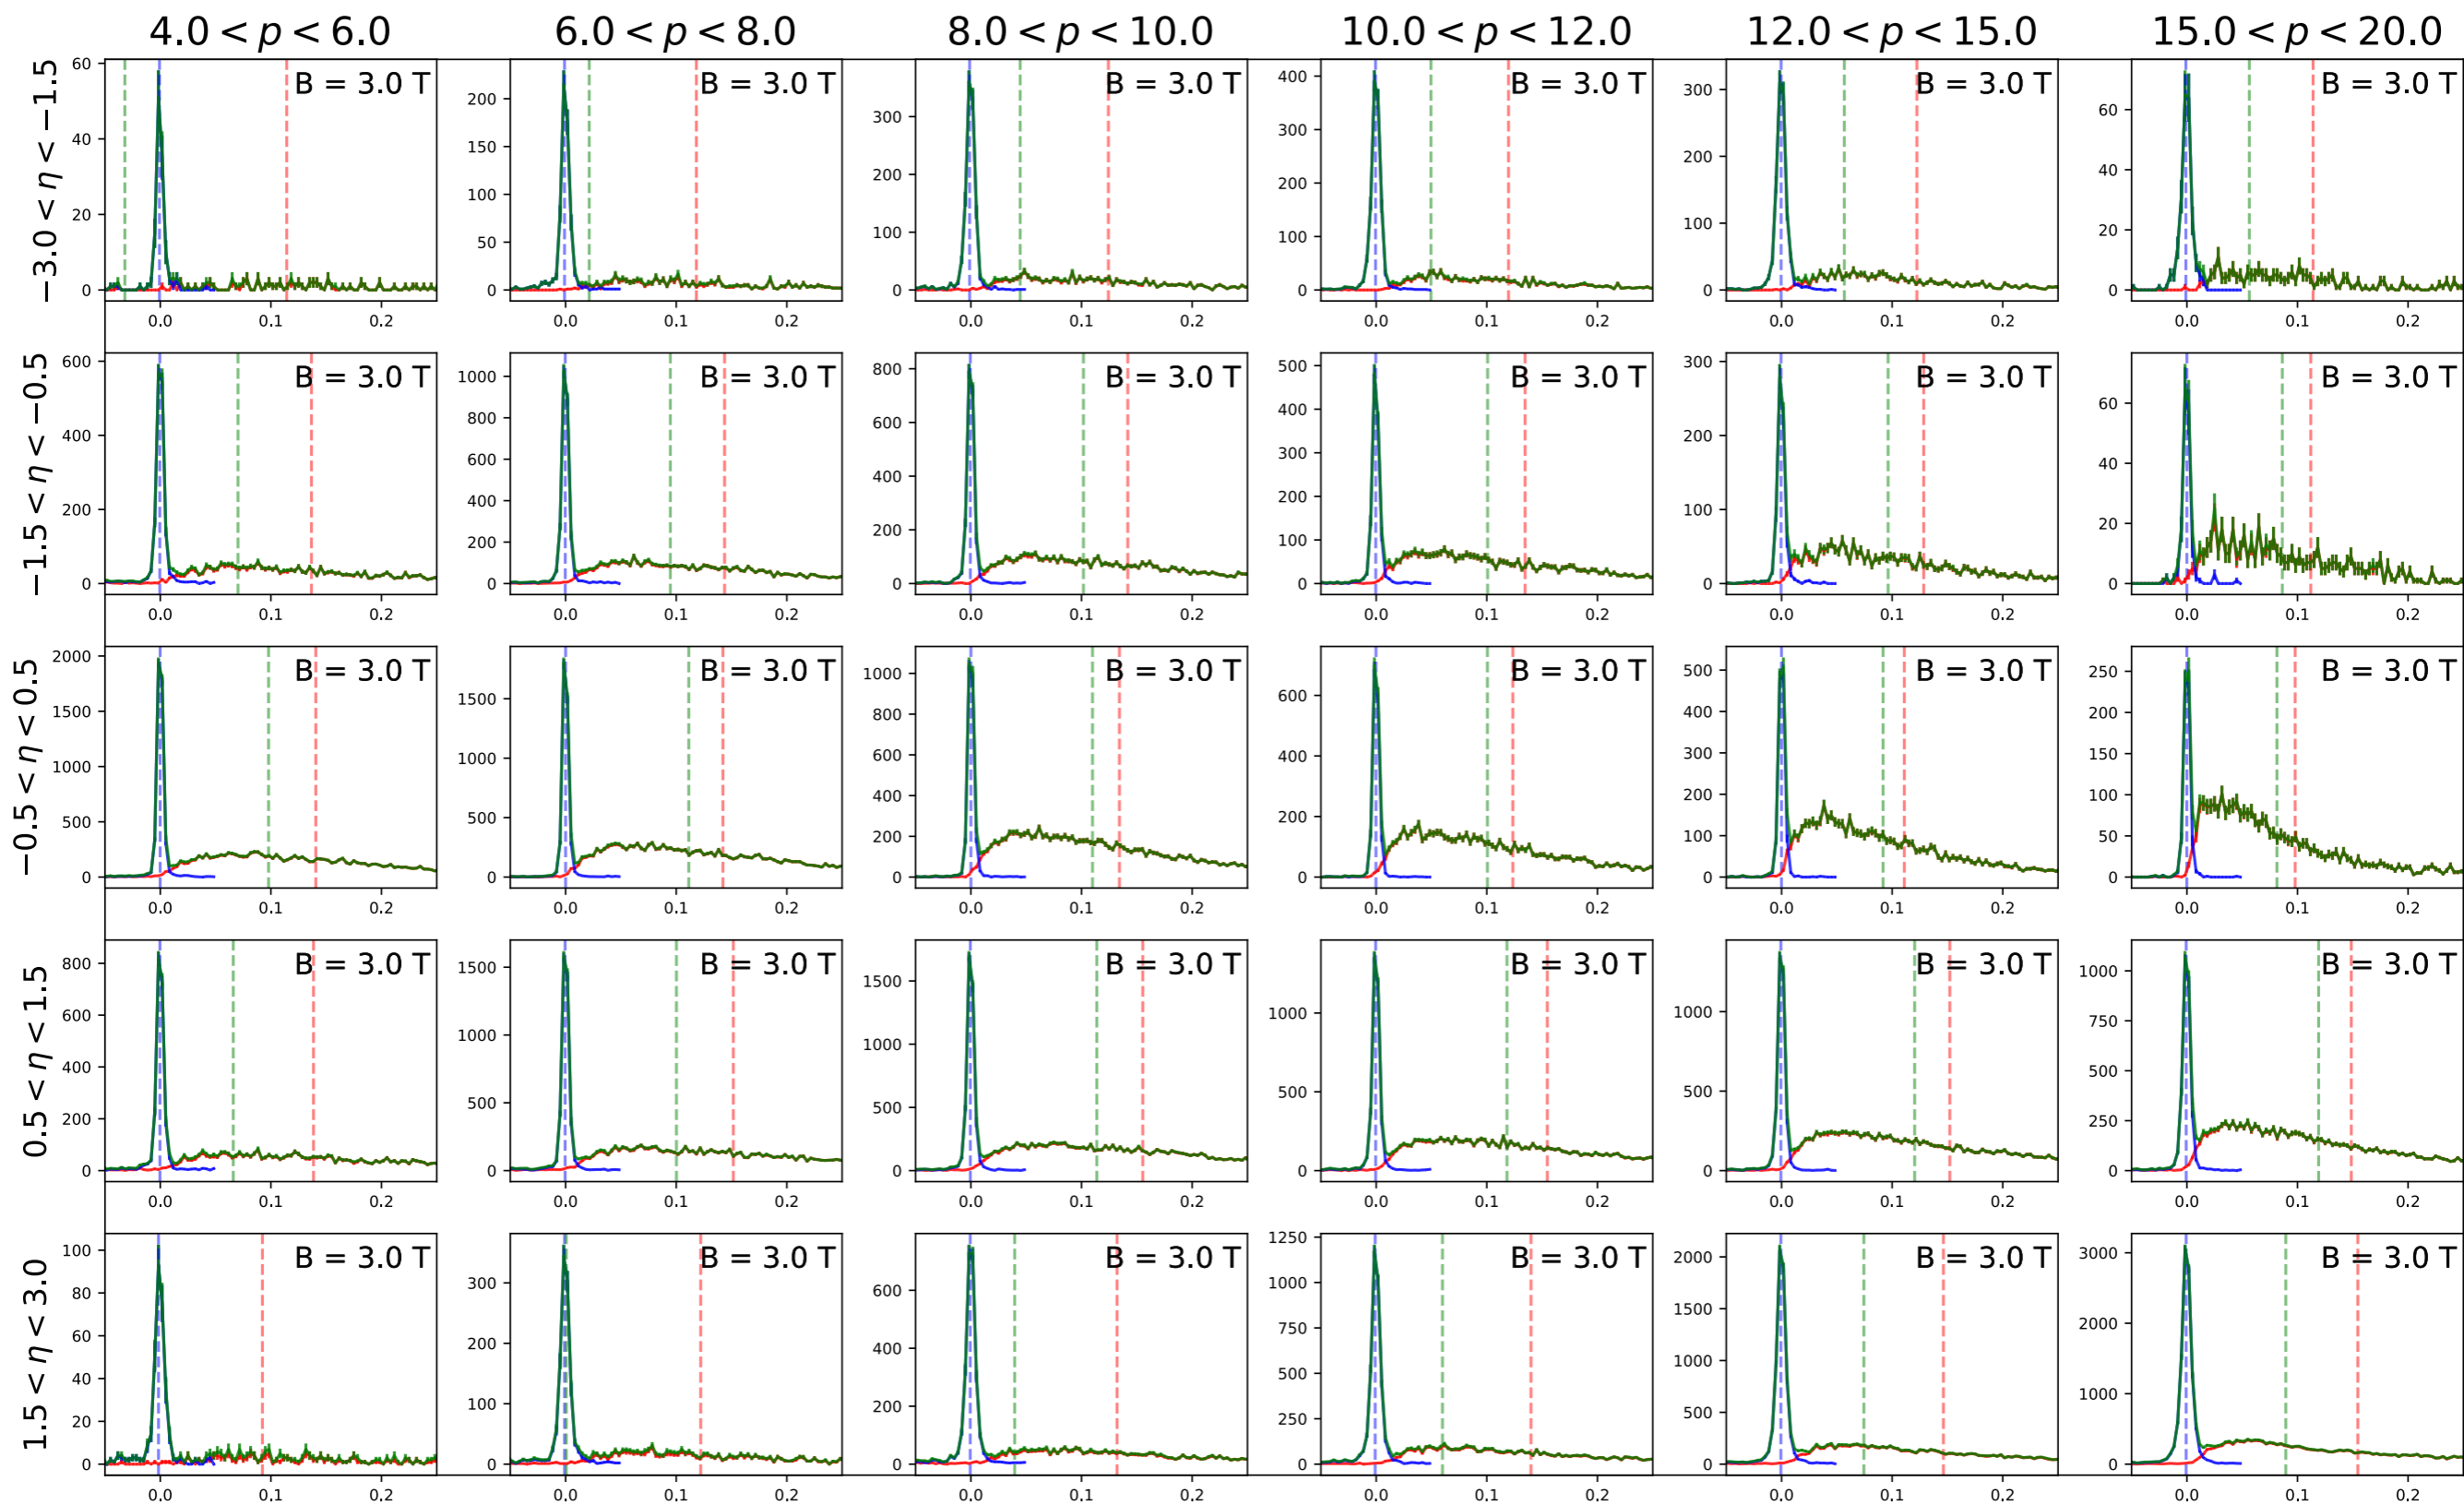

dp/p[%]

$N_{\text{Missed}} < 1$   $N_{\text{Missed}} \geq 1$  No  $N_{\text{Missed}}$  Cut

**B = 3.0 T**

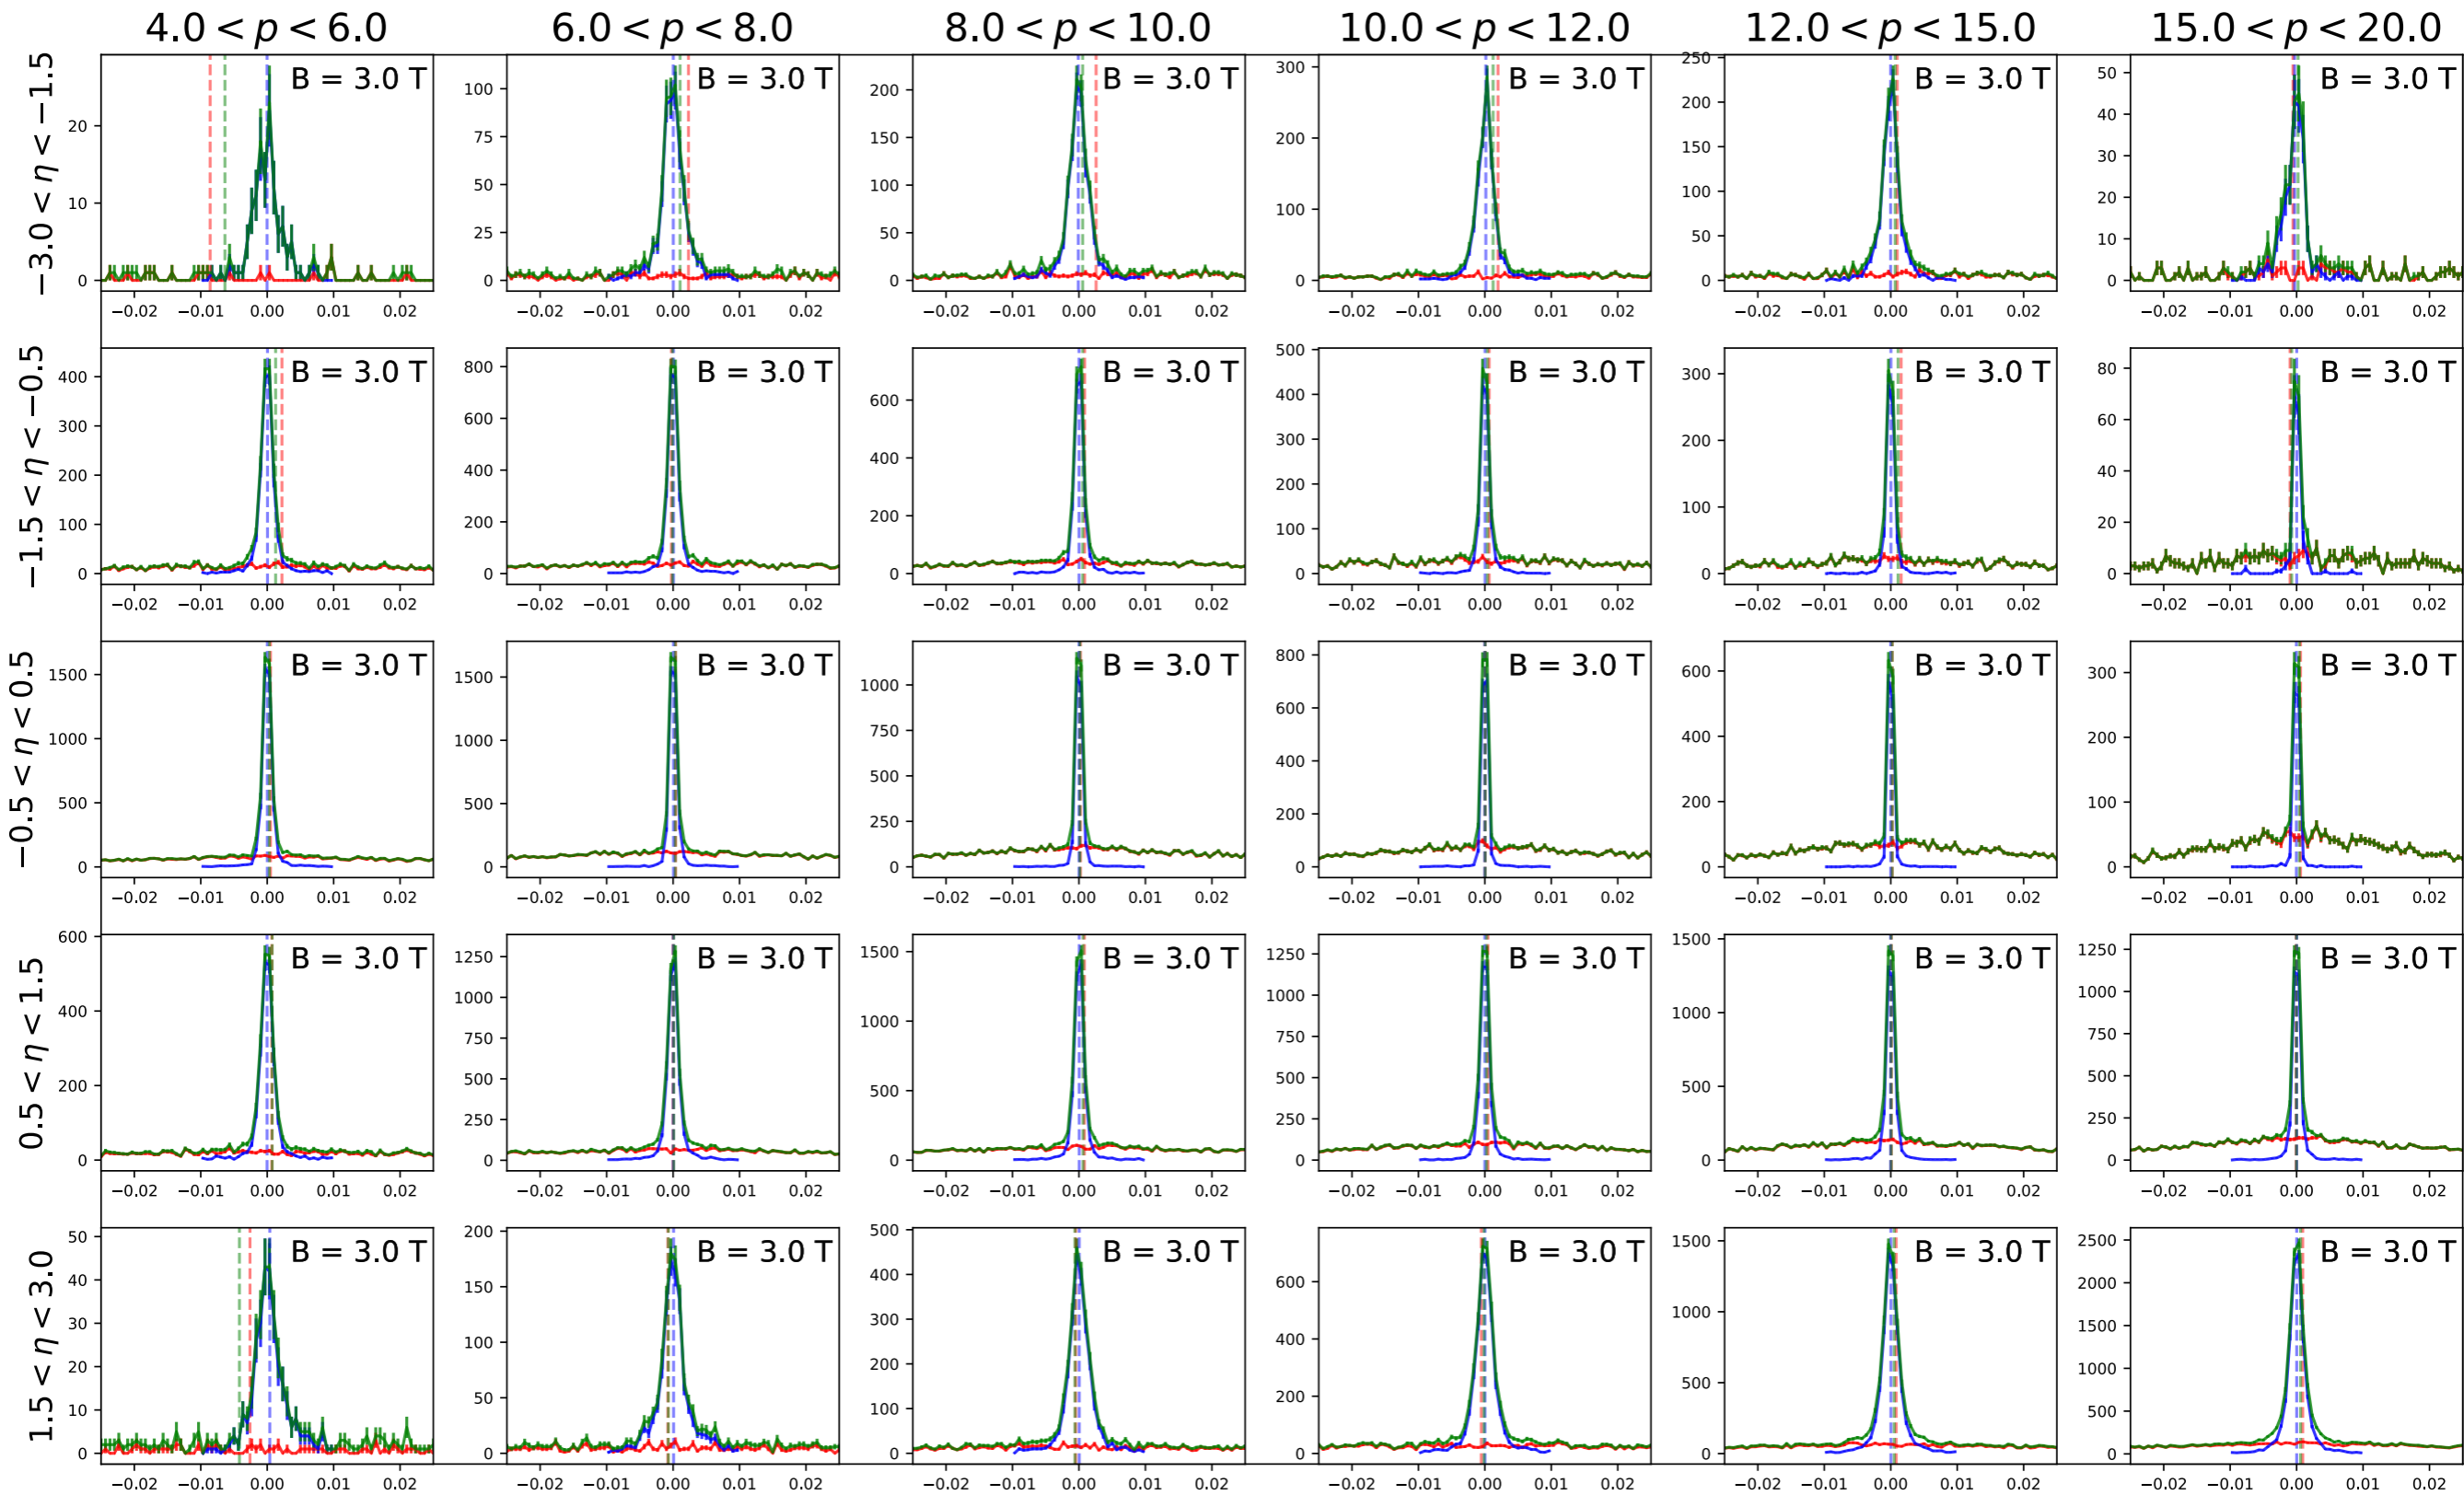

dp/p[%]

# $d\phi$ [mrad]

# $d\phi$ [mrad]

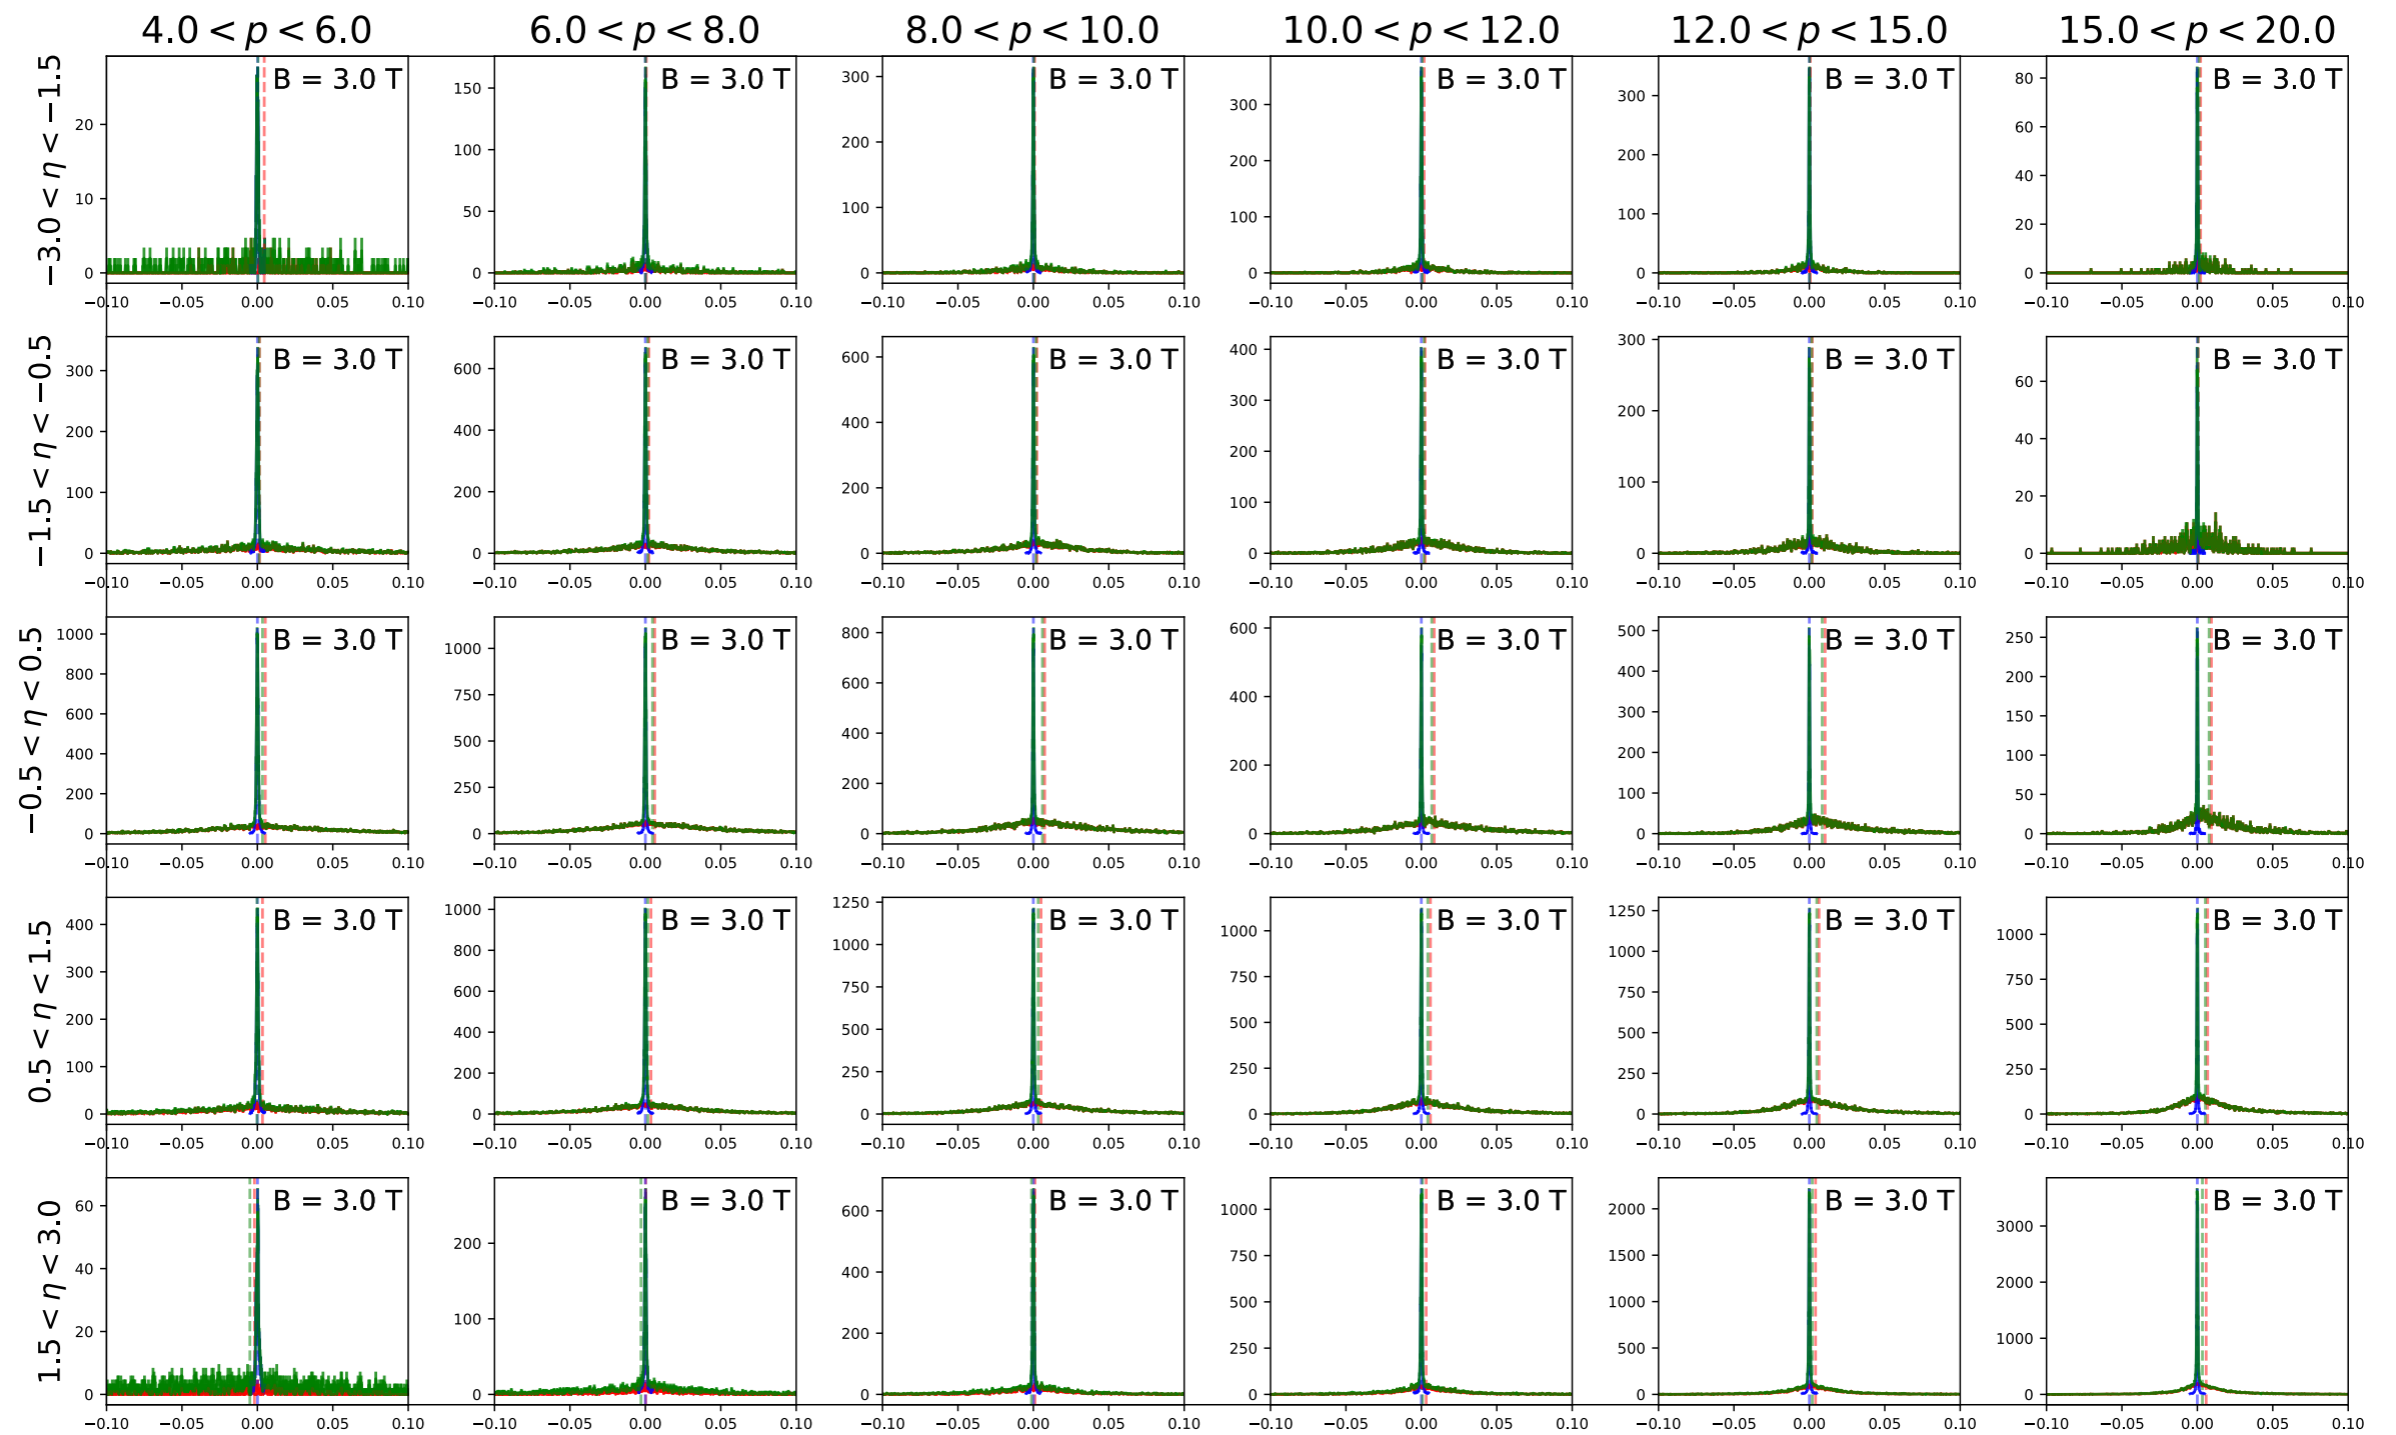

# $\theta$ Resolutions

# $d\theta$ [mrad]

# Reconstructed Jet $\eta$

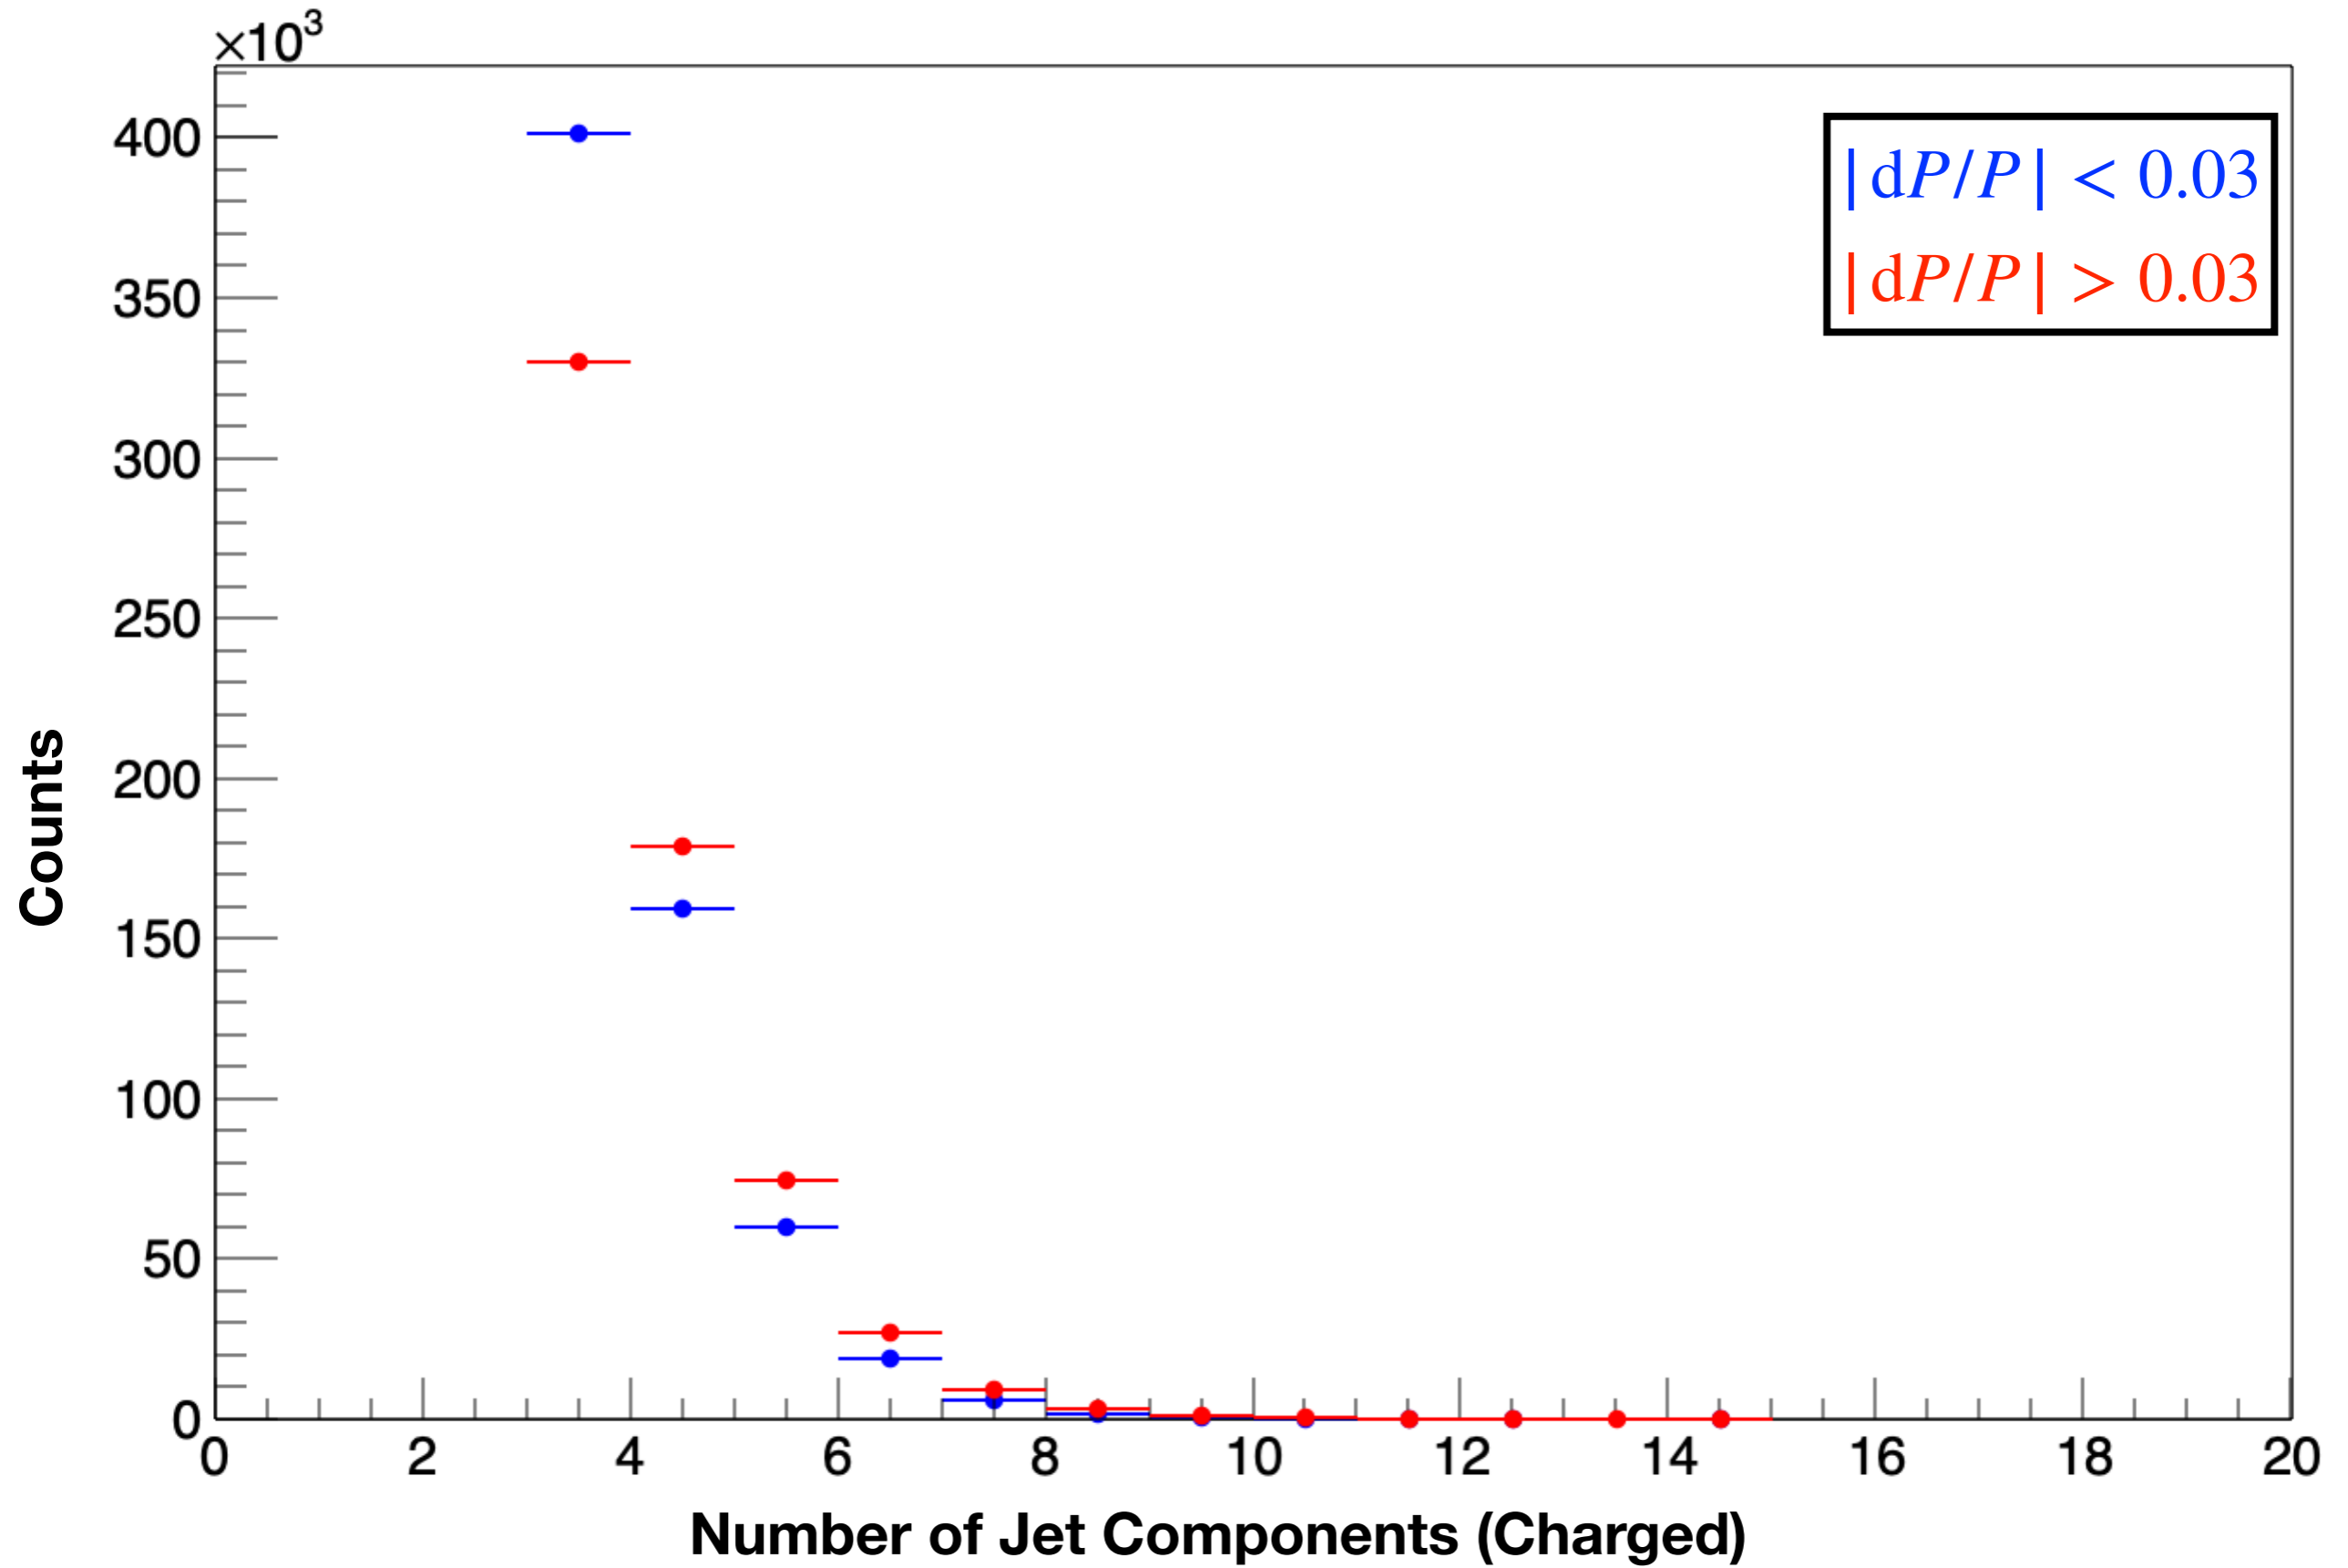

# Jet Component Distributions

# Jet Component $\eta$

The central barrel layers meet the endcap of the all-silicon tracker at  $\eta \approx 1.1$ , jets near this region are omitted in the resolution calculation

# Reconstructed Jet N Component

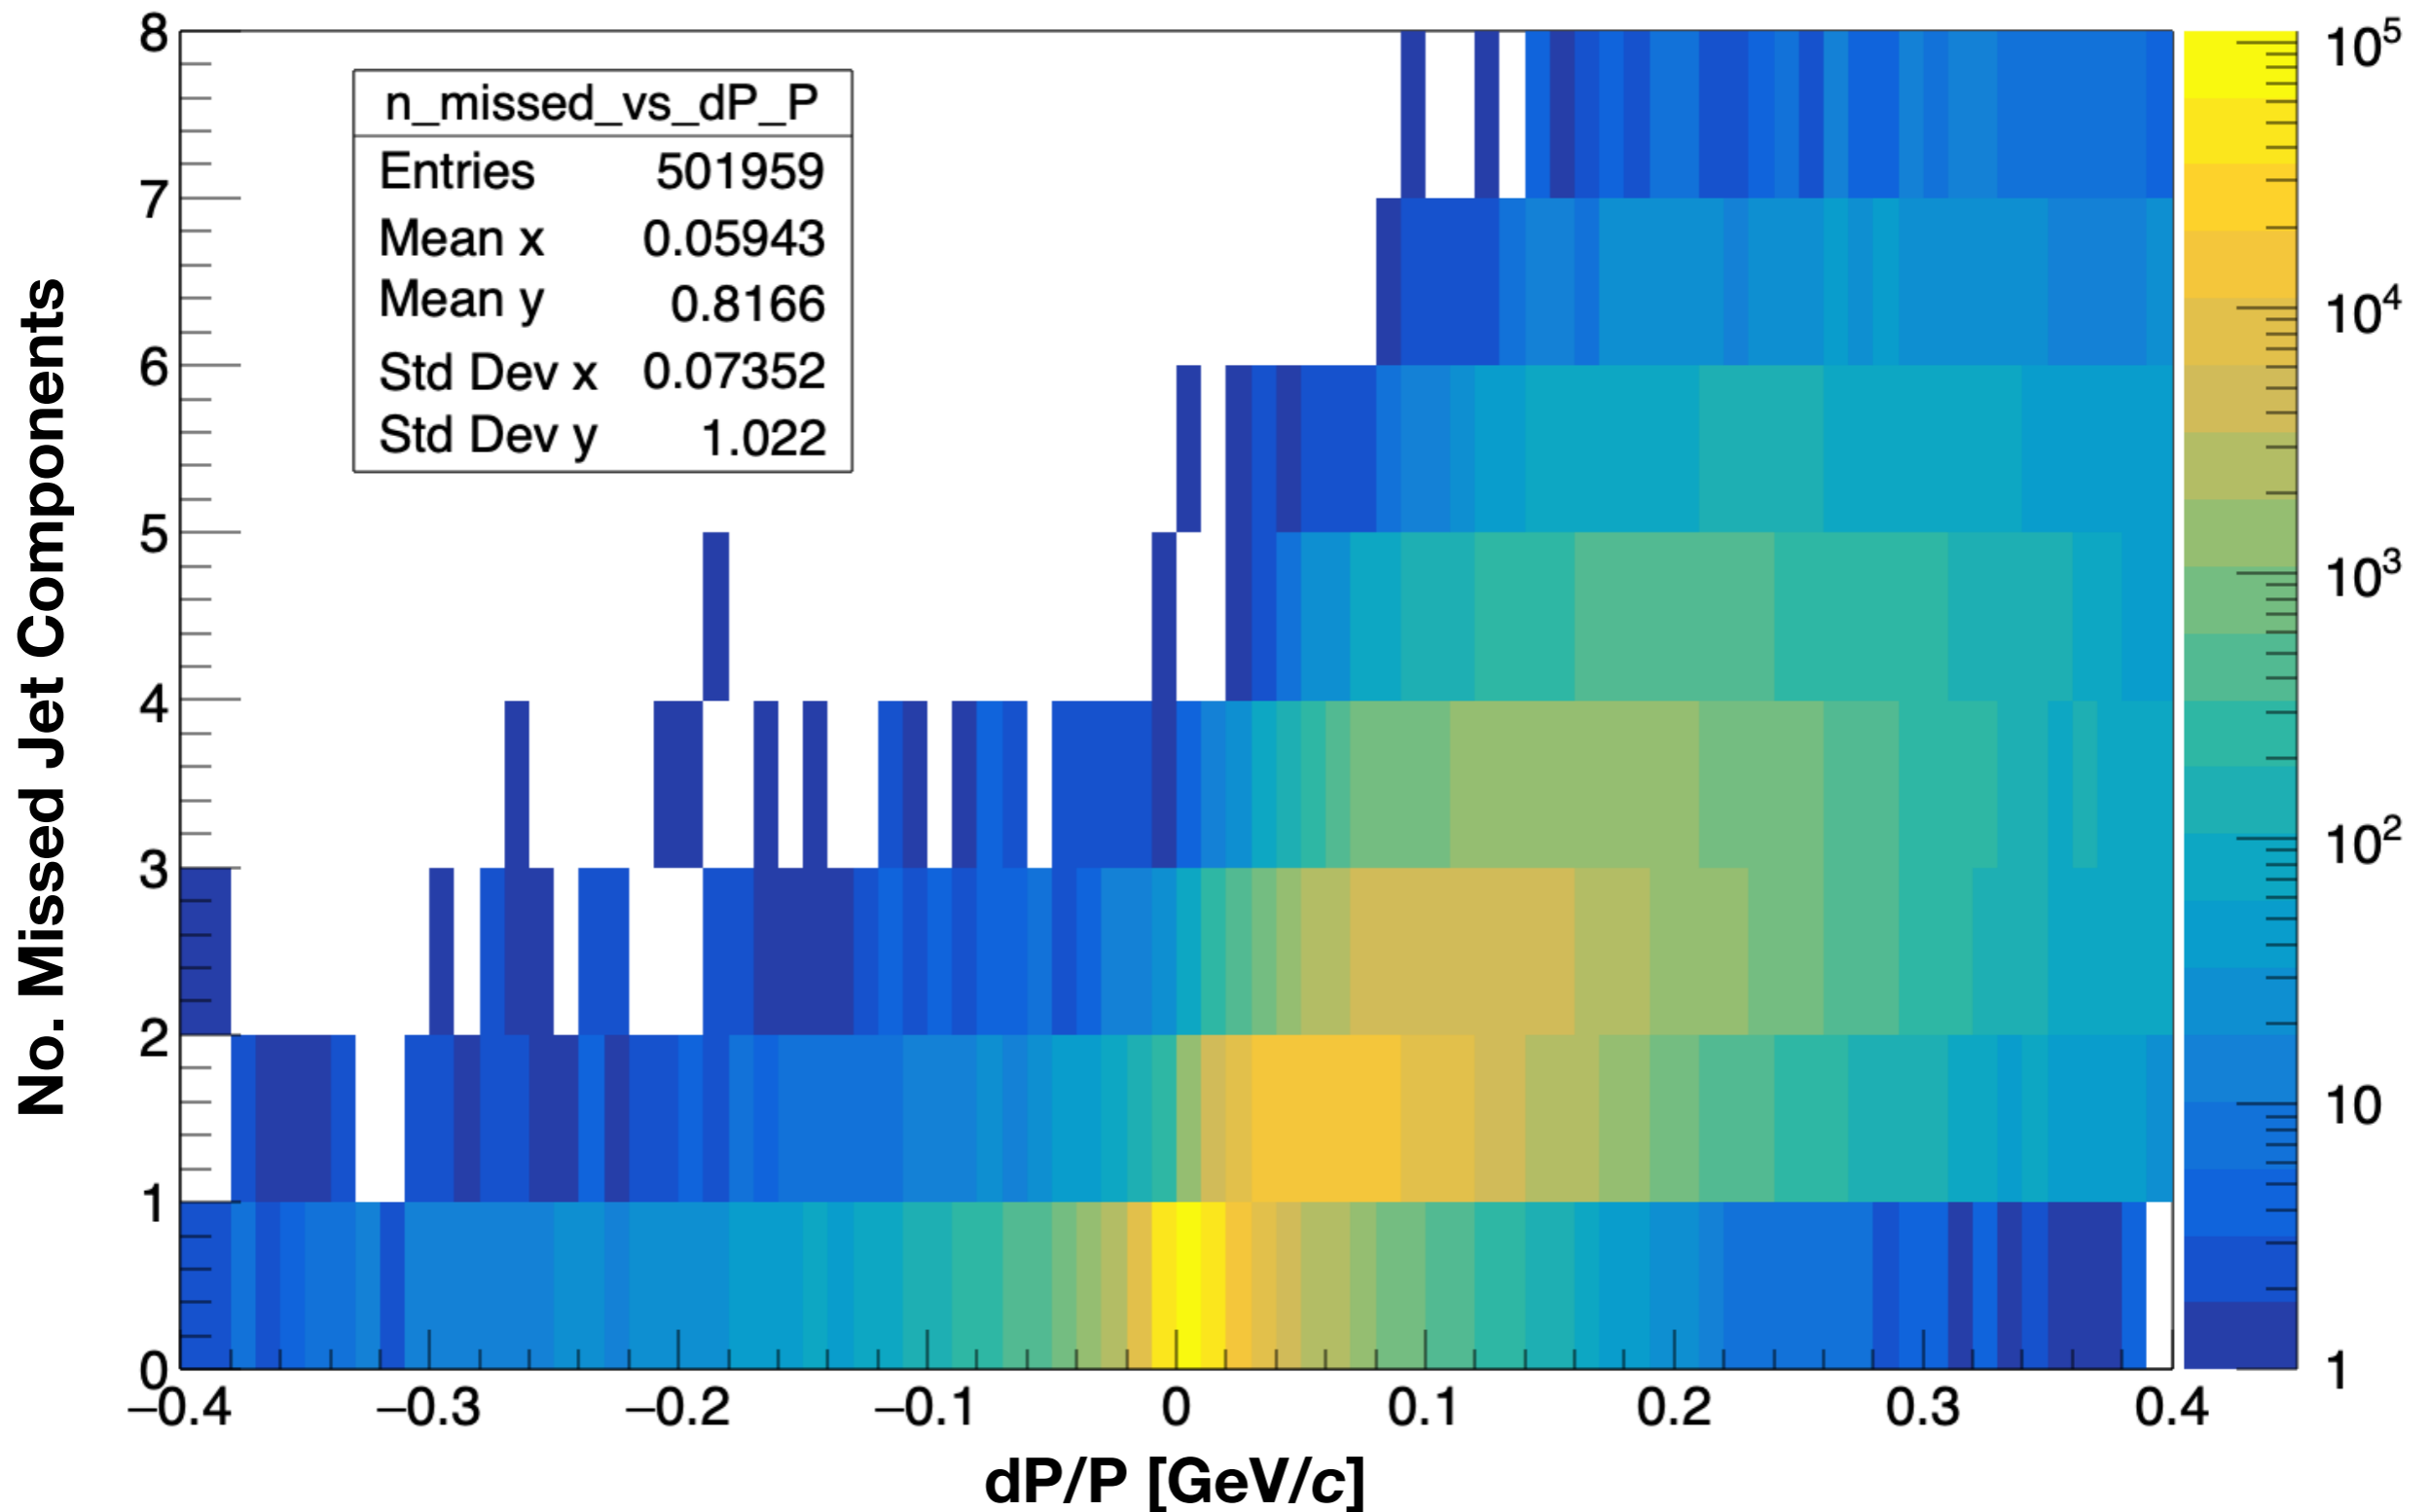

# No. Neutral Components in Original Truth Jet VS. dP/P

$$N_{\text{missed}} = N_{\text{constituents}}^{\text{truth}} - N_{\text{constituents}}^{\text{reco}}$$

## No. Missed Jet Components VS. dP/P

# Are lost constituents and poor dP/P due to low pT constituents?

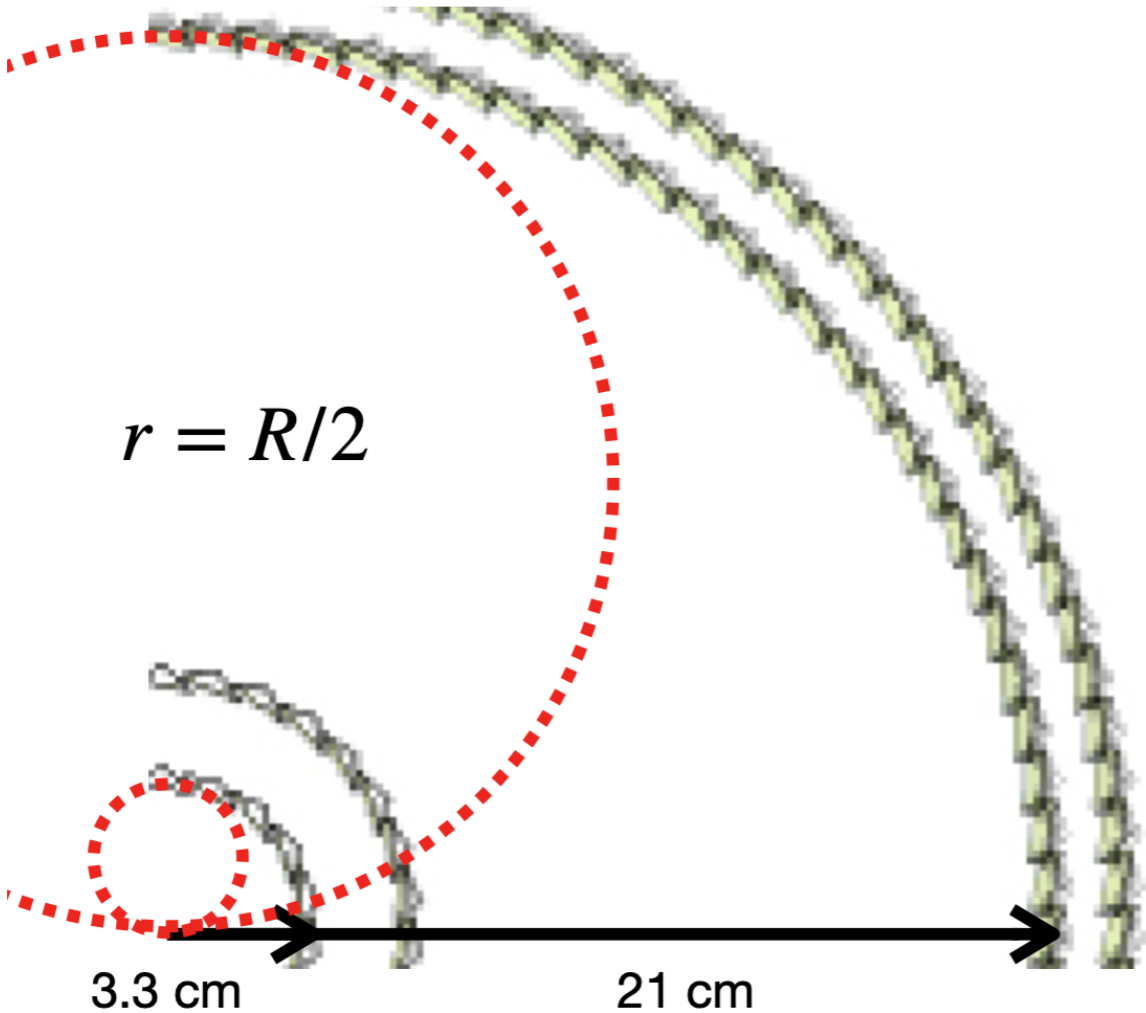

$$m \frac{v^2}{r} = qvB$$

\* Need at least three points for a momentum measurement

$$p \text{ [GeV}/c] = 0.3B \text{ [T]} \cdot r \text{ [m]}$$

p<sub>T</sub> thresholds

	R = 3.3 cm	R = 21 cm
B = 1.4 T	7 MeV	44 MeV
B = 3.0 T	15 MeV	95 MeV

Credit: Rey Cruz Torres 6

# Details for 70-150 MeV/c (B=1.5 T)

---

## Abstract:

latest tracking performance numbers as provided recently to DWG conveners (also circulated directly to the PWG conveners).

## Referenced Files

### 1 [Tracking characteristics](#)

Latest version of tracking from EICUG YR Tracking WG Wiki

## Notes:

Minimum pT for B = 1.5 T:

100 MeV/c for  $-3.0 < \eta < -2.5$

130 MeV/c for  $-2.5 < \eta < -2.0$

70 MeV/c for  $-2.0 < \eta < -1.5$

150 MeV/c for  $-1.5 < \eta < -1.0$

Minimum pT for B = 3 T:

150 MeV/c for  $-3.0 < \eta < -2.5$

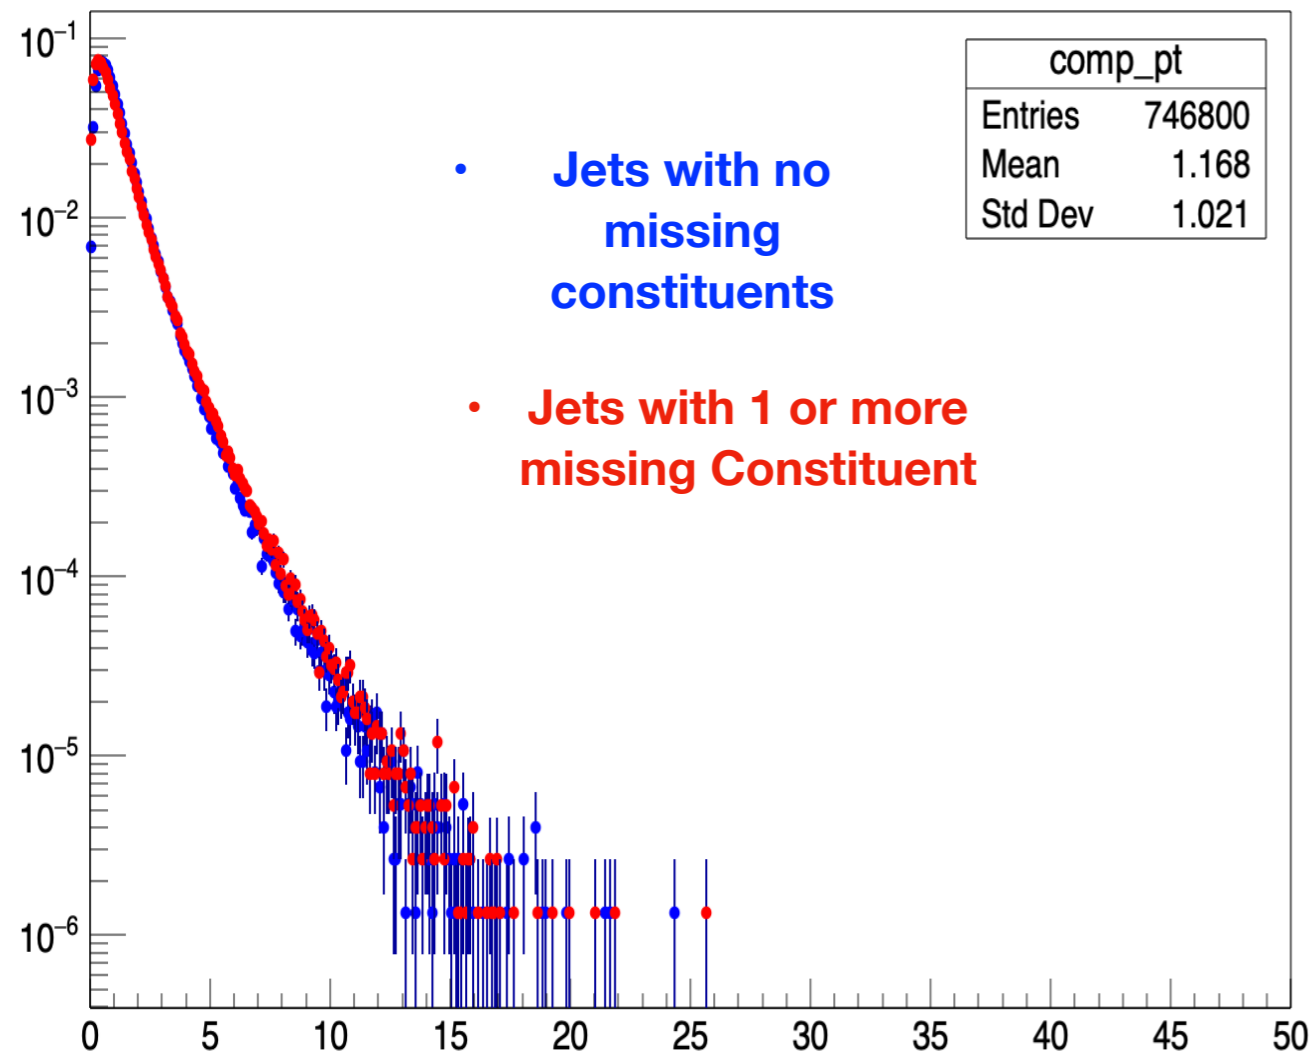

220 MeV/c for  $-2.5 < \eta < -2.0$

160 MeV/c for  $-2.0 < \eta < -1.5$

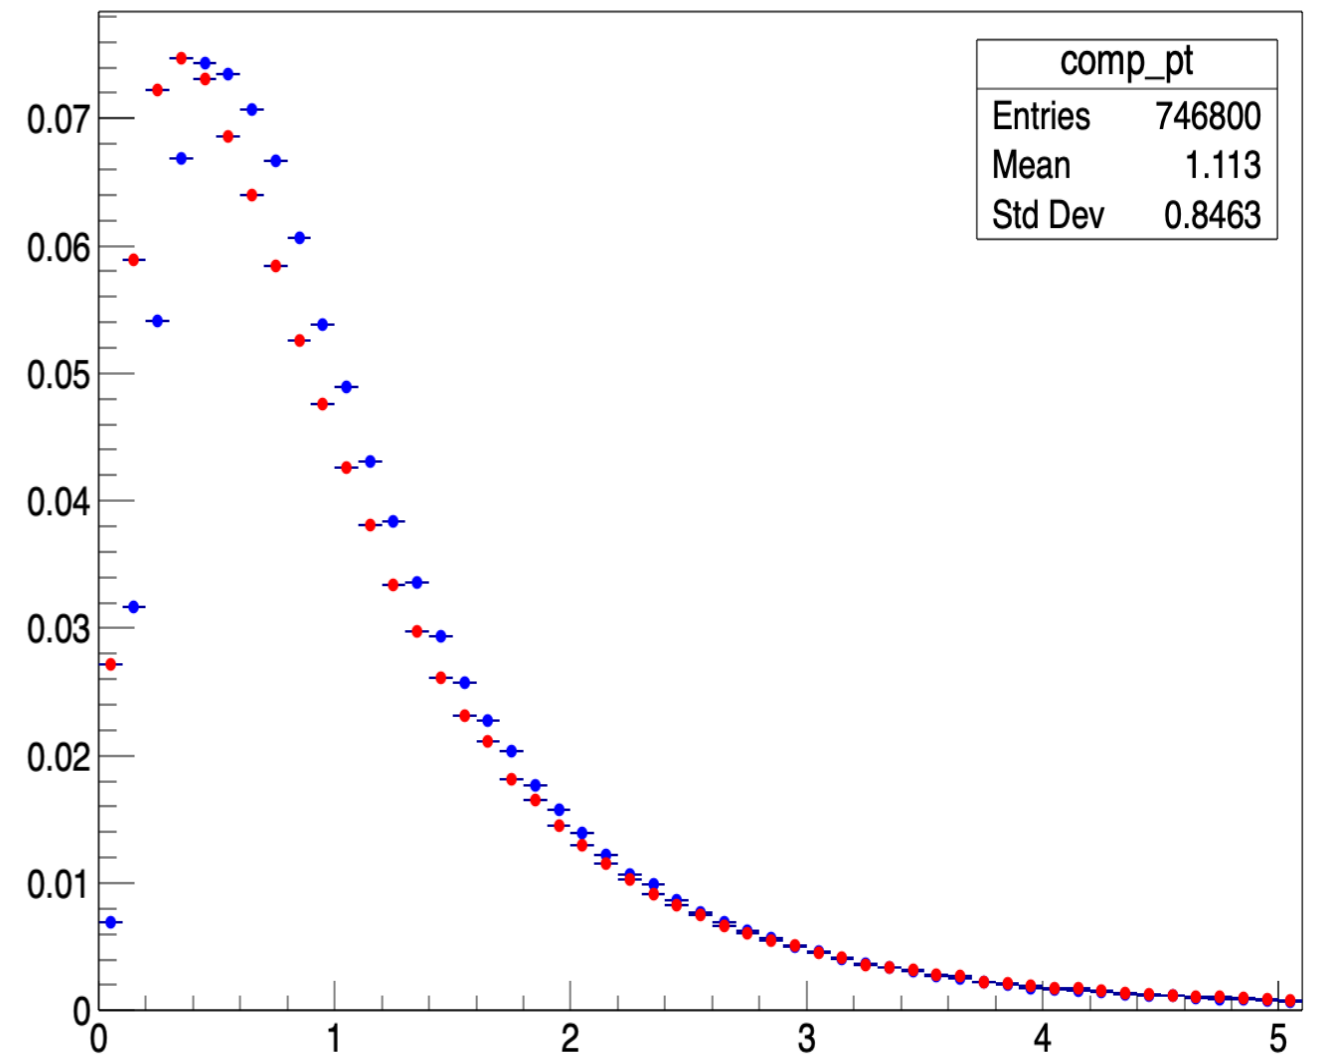

300 MeV/c for  $-1.5 < \eta < -1.0$

# Jet Component $p_T$

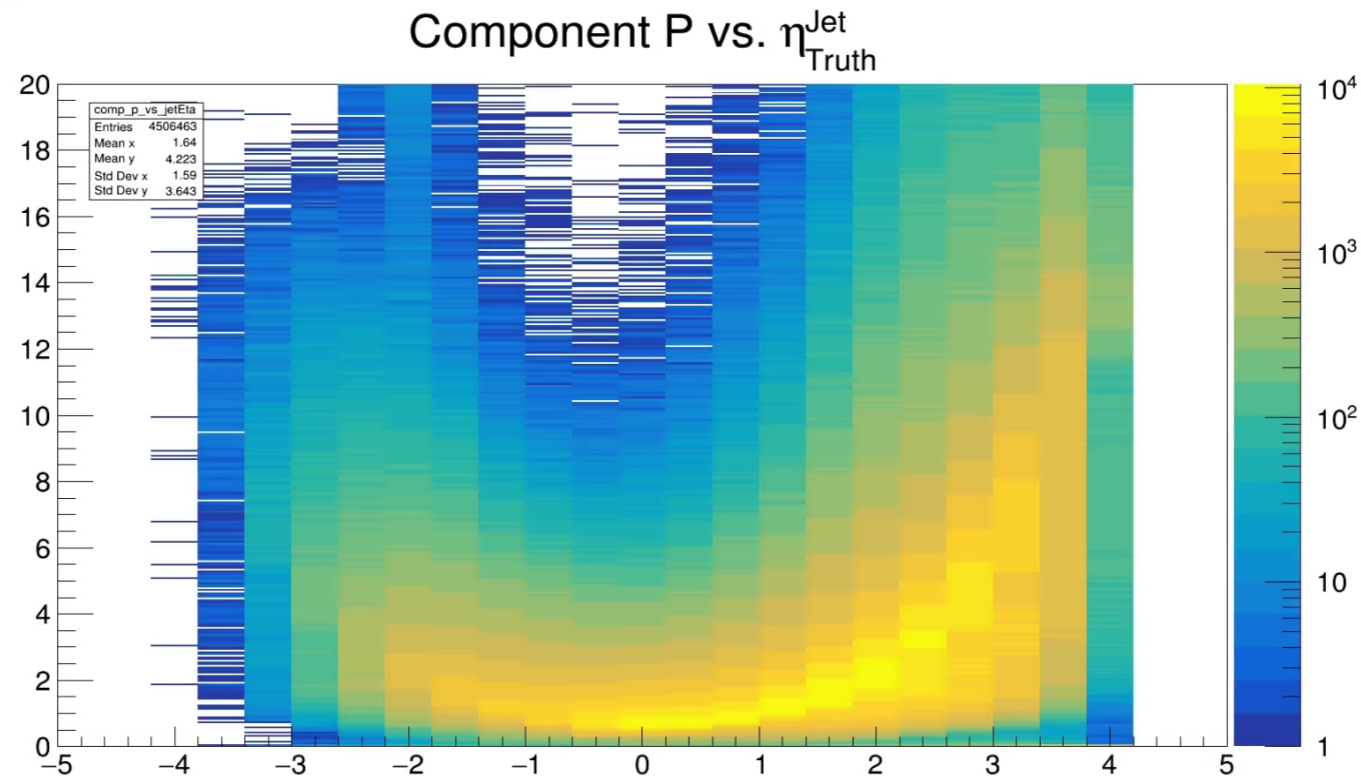

# Jet Component $p_T$

# Jet Component $p$ vs Jet $\eta$

$|dP/P| < 0.03$

Constituent  $p$  [Gev/c]

$|dP/P| > 0.03$

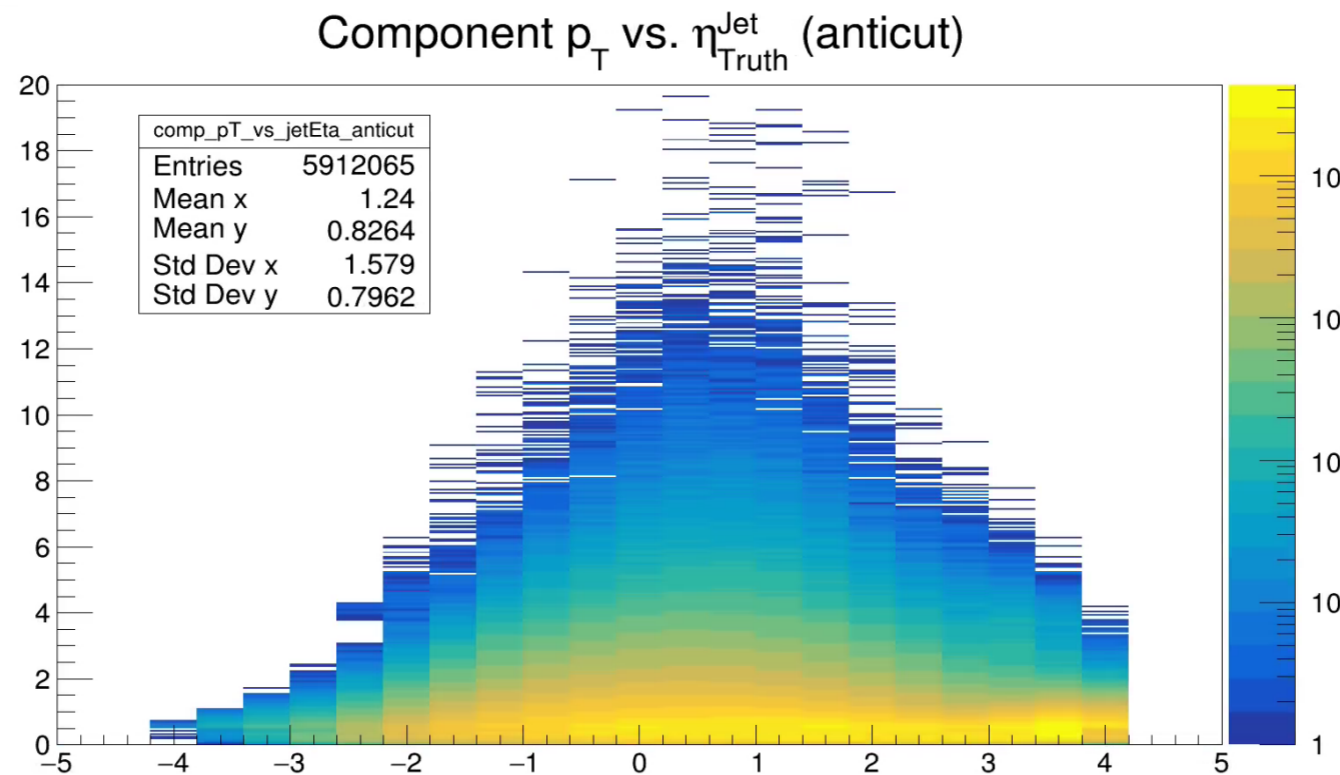

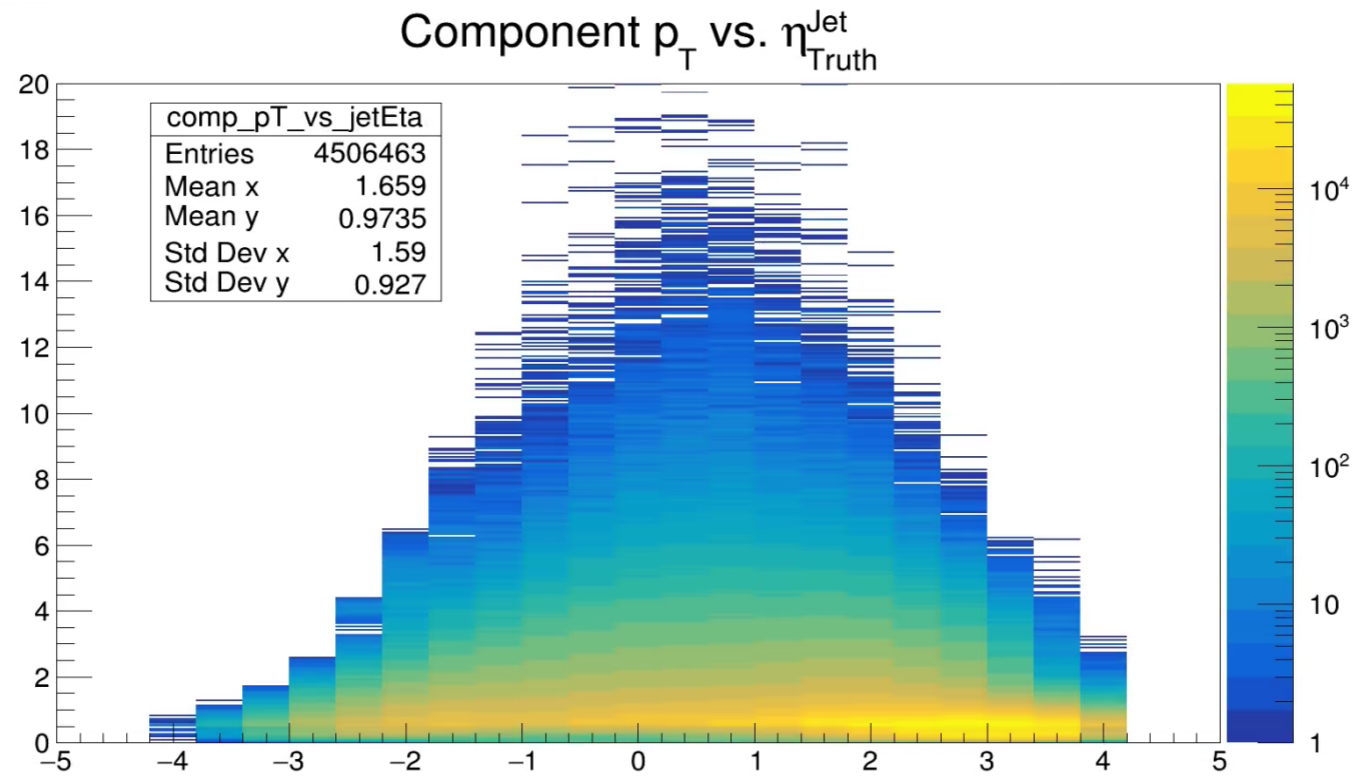

**An  $\eta$  dependent  $p$  cut does not seem to be a likely solution**

# Jet Component $p_T$ vs Jet $\eta$

$|dP/P| < 0.03$

$|dP/P| > 0.03$

Constituent  $p_T$  [Gev/c]

$\eta_{\text{Truth}}^{\text{Jet}}$

**An  $\eta$  dependent  $p_T$  cut does not seem to be a likely solution either**
