<https://drive.google.com/file/d/1bl9M9gZYGga2TGkOdZ0TH8LRfrXq9-Ps/view>
 - **Presented to Host upon arrival**
 - **Host required to ask visitor to leave if they will not complete the form**

Maintaining a Healthy Safety Culture

Managers and Employees Plan and Execute Work Together

1. Line managers are involved in work planning and execution:

- Be responsible and accountable for operational outcomes
- Anticipate and prevent events using hazard controls
- Encourage workers to question/pause work

2. Workers are involved in work planning and execution:

- Be responsible for performing work safely
- Ensure each work step and hazards are identified and controlled
- Raise safety concerns...pause work with concerns or to ask questions - Anticipate error-likely situations and take action

3. Work teams use risk management process to identify controls

- Anticipate what “must go right” to perform work safely
- Identify and evaluate hazards
- Tailor controls to work being performed---Always Use Controls---No Shortcuts

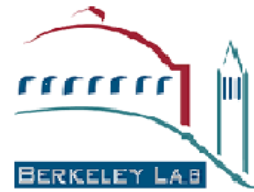

4. Organizational culture normalizes deviation from expected safe practices:

- Ask questions about the “what and why” of work/experimental practices
- Respectfully question any deviation from established best practices
- Trust is present throughout the organization...safety is everyone’s responsibility

SAFETY FIRST

Equipment Deliveries

- Deliveries have been blocking hallways
 - Per Fire Code, must maintain 44” minimum
- Recently lead to an injury
 - Pallet, with small box, left in hallway
 - Number of lights out
 - Employee was working on laptop
- Takeaways
 - Don't look at phone or laptop while walking
 - Report burned out lights to DSC or Building Manager
 - Move packages in ASAP and notify Transportation to collect pallet
